

regional languages, including Tamil, Telugu, Bengali, and Gujarati. Users will also get three months of free JioCinema Premium, a major advantage given that Jio now holds exclusive rights to 90-95% of India's cricket telecasts," Marwah shares.

Long-Term Software Support & After-Sales Service

One of the biggest concerns with non-mainstream operating systems is long-term software support. Marwah assures users that Jio TeleOS is here to stay.

"This isn't a short-term experiment. Jio's commitment ensures long-term updates, security patches, and ecosystem growth. Unlike many new ventures, Jio is a public company, meaning there's a responsibility to maintain and improve the OS consistently. Consumers can expect software support on par with any mature OS."

For after-sales service, the network remains unchanged from Thomson's existing support structure, ensuring

seamless service, even in tier-two and tier-three cities.

Where can you buy Thomson's Jio TeleOS TVs?

At launch, Thomson's Jio TeleOS-powered TVs will be available exclusively on Flipkart. While there are no immediate plans for offline retail, Marwah hints at potential future expansions. Thomson's Jio TeleOS TVs will be available for Rs. 18,990. It offers a 4K QLED display and support for HDR formats. The inclusion of Dolby Audio ensures immersive sound, while Jio TeleOS provides a streamlined smart TV interface with access to popular streaming apps and voice controls.

What's next for Thomson in 2025?

Looking ahead, Thomson is gearing up for an aggressive expansion across all TV segments.

"2025 will be a landmark year for us. We are planning a launch every month until August, covering ultra-premium, premium, affordable, and super-afford-

able segments. Unlike 2024, where we had to skip certain launches due to market conditions, we are now ready to compete in every category." While predicting market trends is tricky, Marwah remains optimistic. "TV consumption patterns have been shifting, with more people watching content on mobile devices due to concerns over explicit content on OTT platforms. However, with regulations tightening, we may see a resurgence of traditional TV viewing."

Avneet also highlighted how new tax relaxations will increase consumers' disposable income, which is likely to boost spending on consumer durables, further adding to positive market sentiment. With Jio TeleOS, Thomson and SPPL have taken a bold step towards evolving India's smart TV landscape.

By offering a highly localized, content-rich experience with long-term support, they aim to create an ecosystem that can stand toe-to-toe with global giants. As years unfold, it will be fascinating to see how Indian consumers respond to this home-grown innovation. ■
