

5 unique TVs that were ahead of their time

They were ahead...
But by how much?

Deepak Singh | deepak@digit.in

Some TVs are just TVs. They come and go, lost in the shuffle of model numbers and incremental upgrades. But every now and then, a TV arrives that's so ahead of its time that it changes the game – or at least tries to. These are the models that dared to be different, pushing the boundaries of display

technology long before the market was ready to embrace them. Some disappeared due to sky-high costs, others because of manufacturing challenges, but all left their mark on the industry. Let's take a look at five unique TVs that were well ahead of their time.

Samsung 55-inch S9C

Launched in 2013, the Samsung S9C was the first OLED TV to hit the market and to this day, it remains the only one of its kind. Unlike modern OLED TVs, which rely on White OLED (WOLED) or Quantum Dot OLED (QD-OLED) technology, the S9C featured individual Red, Green, and Blue subpixels per pixel just as OLED displays on smartphones and it also had a curved screen. This made for stunning color accuracy and vibrancy, with no need for color filters or conversion layers.

While this approach delivered exceptional picture quality, manufac-
