

closing apps, switching between multiple apps like Instagram and Twitter and generally, the performance remained smooth in my time with it.

The MediaTek Dimensity 7400 is just fine. It'll handle day-to-day tasks without complaints, but it's not winning any benchmark championships. Power users or serious mobile gamers might find themselves wanting more headroom, in which case there are plenty of phones in the sub-30k segment that focus on just offering raw performance for gamers.

We also have dual stereo speakers with Dolby Atmos support. There are two microphones for noise cancellation during calls, but like most modern phones, there's no headphone jack.

SOFTWARE AND UX

Motorola's approach to Android remains one of the cleaner implementations around. The Edge 60 Fusion runs Android 15 out of the box, with Motorola's promise of three major OS updates and four years of security patches. This puts it slightly behind some competitors that offer longer support, but it's still respectable. In fact, our review unit has already received the March Security update, and Motorola has gotten better with timely updates.

The Moto UI is fast and snappy and doesn't come with a single bloatware app. Now, I've used a lot of these Android skins across different phones, and I feel Moto UI, along with Nothing OS, are two of the cleanest and freshest user interfaces on phones today, especially in this price segment.

We also get a ton of AI goodness with Moto AI like contextual search, notification summaries and Magic Canvas, but I really like the Remember This tool, which lets you save screenshots, photos and notes with context so that it reminds you later on.

In addition, Circle to Search is there, and we also get Quick Launch. Just double-tap the back of the phone to launch the Moto AI dock. This can, of

course, be customised to launch any app of your choice, take a screenshot, play music and more.

CAMERAS

The camera system is headlined by a 50-megapixel main camera that uses Sony's LYTIA 700C sensor with OIS. On paper, this is a solid setup and performs well, especially in challenging lighting conditions. Supporting this is a 13-megapixel ultrawide camera with a 120-degree field of view that also doubles as a macro camera. The third rear lens is actually not a camera but a 3-in-1 light sensor for ambient light detection, flicker reduction, and RGB colour sensing. For selfies, there's a 32-megapixel front camera that bins down to 8-megapixel for better light sensitivity. Video capabilities include 4K recording at 30fps or 1080p at 60fps from both front and rear cameras, along with several special modes like slow motion up to 240fps at 720p. There's an auto-enhance feature that uses AI to boost highlights, details and vibrancy but takes an extra 5-6 seconds to process the image. In daylight, the Edge 60 Fusion's camera offers great performance with good details, colours and textures. The pictures look vibrant with natural-looking bokeh, and even in harsh light, the camera can balance saturation levels without overexposing highlights.

In low light, the Edge 60 Fusion performs even better as it retains close to natural colours and details, especially in shadow areas. The camera offers deeper and more natural blacks

in pictures shot at night or in low-light conditions. Side-by-side comparison with the Nothing Phone 3a showed better detail retention and crisp visuals as opposed to softening around the edges.

BATTERY LIFE

Battery life is a strong point with a large 5500mAh battery, which is a 500mAh increase from the Edge 50 Fusion. In my use, which included a lot of heavy lifting, juggling

between multiple social media apps, watching videos, using Google Maps, a bit of gaming on the side and not to mention, the display being at 120Hz at all times, I got around 7-8 hours of screen on time easily.

In the PC Mark battery life test, the Edge 60 Fusion lasted for over 9 hours, which is a respectable score when it comes to daily use.

Motorola provides a 68W fast charger in the box, and using it, you can charge the Edge 60 Fusion from 0-100% in just about 48 minutes.

VERDICT

The Motorola Edge 60 Fusion is a complete package with some clear strengths in display and build quality. Starting at ₹22,999, the Edge 60 Fusion isn't trying to be everything to everyone, but if you want a dependable performance, a great viewing experience, clean and snappy software experience, this is the phone to buy. However, if you want cutting-edge raw performance, swipe left.
