Apple iPhone 17 Pro camera details leaked!

Apple will be introducing its iPhone 17 series in the global market this year. The lineup may include the iPhone 17, iPhone 17 Air, iPhone 17 Pro and iPhone 17 Ultra. While the lineup and features has not been confirmed at the moment, the leaks have provided additional details about the iPhone 17 Pro camera setup.

As per the reports, iPhone 17 Pro is said to feature 48MP triple camera setup including a 48MP telephoto lens. If true, the upcoming iPhone 17 Pro will offer enhanced portrait photog-

raphy as well as low-light performance and enhanced zoom.

According to tipster Majin Bu, Apple will introduce a new 48MP telephoto camera sensor, replacing the 12MP telephoto lens currently found on the

iPhone 16 Pro. The device will come with an 85mm lens (35mm equivalent). However, this may reduce the optical zoom from 5x to 3.5x, Apple is also planning to introduce a 7x lossless digital zoom via in-sensor crop technology. This will also improve low-light performance, as higher-resolution cameras can capture more light and offer sharper and brighter images. Additionally, Apple may also offer the 8K video recording support. For the unversed, the 8K recording option is already available in multiple Android devices. tinyurl.com/2s3eunma

SanDisk launches WD BLACK SN7100 SSD

SanDisk has officially introduced the WD_BLACK SN7100 NVMe SSD in India. Specifically designed for gamers and users who need high-speed storage, the storage device is built on TLC 3D NAND architecture and supports PCIe Gen 4. It is available in multiple storage variants, offering up to 4TB storage capacity and faster performance than its predecessor. WD claims that the 1TB and 2TB variants offer read speeds of up to 7,250MB/s and write speeds of up to 6,900MB/s. tinyurl.com/6ncsh9xt

Google offers free Pixel 7a battery repairs even in India

If you own a Pixel 7a and have noticed your phone looking a little puffer than usual, you're not alone. Google has officially acknowledged a battery swelling issue affecting some Pixel 7a units. In a recently published support page, the tech giant said that certain devices may show signs of battery bulging, faster battery drain, or charging problems. Battery replacements are currently available at walk-in repair centres in countries like the US, India, Canada, the UK, Germany, Japan, and Singapore. tinyurl.com/3d7m8zrk
