

Not Just a Startup. A Sankalp.

How **Sidhant Suri** is building a culture-first supply chain empire, one delivery – and one belief – at a time

Sidhant Suri isn't your typical founder chasing scale and speed. He's the kind who pauses to ask, "Are we doing this right?" or "Is it the right time?" before asking, "How fast can we do it?"

From starting his journey in the crowded fruit markets of Delhi to running two of the most respected names in B2B food logistics – Urban Harvest and DeliverIt – Sidhant has stayed focused on one thing: purpose-built systems that serve people, not just profits.

Q You recently launched a book, SANKALP – The Urban Harvest Culture Manifesto. What inspired it?

A As we scaled, I noticed how easy it is for teams to lose their "why." SANKALP was written to anchor us. It's our cultural playbook – about how we treat customers, vendors, produce, timelines, and most importantly, each other. It's more than a manifesto – it's a commitment to build something meaningful, not just successful.

Q What makes DeliverIt different from other delivery or supply chain players?

A Most players are household-consumer focused. We're HoReCa-first. We've tailored our tech, SKUs, fulfilment models, and delivery timings to suit restaurant kitchens, not homes. And we don't just deliver – we curate, clean, and standardize every order.

Q You mentioned plug-and-play APIs. What does that mean for partners?

A It means a kitchen manager never

has to pick up the phone to order again. Their POS will auto-suggest orders based on sales. Our APIs sync inventory, billing, and delivery windows seamlessly with their internal systems. It's true backend automation.

Q How do you ensure freshness and speed across so many SKUs and partners?

A We use hyperlocal warehousing, real-time inventory visibility, and lean routing tech. But beyond that, it's the culture of accountability – our team knows a delayed box of coriander can ruin a dinner service. That mindset keeps us sharp.

Q What's been the toughest challenge in building DeliverIt?

A Changing behaviours. Vendors are used to cash & chaos. Kitchens are used to buffer stock. We had to earn trust, not demand it. The toughest part wasn't tech – it was building a new way of working that people could believe in.

DeliverIt & Urban Harvest has earned some of India's most respected awards in the last year:

ETNOW: Most Innovative Startup of the Year

Times Drive Summit: Powering HoReCa with Ultra-Fast Fulfilment

Compass Group: Innovation in Kitchen Solutions

Q What does the growth roadmap look like?

A We're expanding into Mumbai, Bengaluru, Chandigarh, Hyderabad, and Jaipur. We're also partnering with institutional clients like hospitals and cloud kitchens and rolling out auto-fulfilment systems powered by AI demand forecasts

Q What kind of team culture have you built at Urban Harvest & DeliverIt?

A We value reliability more than resumes. People here own their outcomes. We call ourselves "behind-the-scenes problem solvers." There's no ego – just execution. And SANKALP ensures we stay rooted in that mindset, even as we grow.

Q Your advice to young entrepreneurs in traditional sectors?

A Don't chase what's trending – chase what's broken. Solve boring problems with better intent. And never build for funding – build for trust. If your customers miss you when you're gone, you're doing something right.

At just 28, Sidhant Suri isn't just building apps or companies. He's shaping a system where kitchens breathe easier, supply chains behave smarter, and teams work with pride. And he's doing it not with noise – but with SANKALP. ■

"When most companies scale, they lose their soul. I wrote SANKALP so we don't."

— SIDHANT SURI
CEO, Urban Harvest & DeliverIt
