## [Must Read]

**ChatGPT 4.1 has 5 improved features that everyone will find useful**

OpenAI  
**ChatGPT**  
**4.1**  
EXPLAINED

When ChatGPT first arrived towards the end of 2022, it felt like a seismic shift in tech. Then came GPT-3, 3.5, 4o, and so many others that I've honestly lost count – due to sheer confusion! With each of these ChatGPT releases, OpenAI promised smarter interactions, better context handling, and improved AI-assisted coding chops – and for the most part it delivered on these promises, albeit with some hallucination baked in.

But OpenAI's latest release, ChatGPT 4.1, isn't just iterative improvement. It's the kind of step-change that makes everything before it look incremental at best – which takes on Claude 3.7 Sonnet and Google's Gemini 2.0 and above with more firepower. Read more to find out more about all the latest features in ChatGPT 4.1.

## [Expan-AI-tion]

**Your iPhone will now train Apple's AI: Here's how**

Apple has historically trained its AI models using artificially generated content, or synthetic data. There are certain drawbacks, particularly when training models to perform complex tasks like long-form summarisation, even though this has removed the need to analyse actual user data. The company is altering how it uses artificial intelligence (AI) to improve tools like Siri and email summarisation in future software updates, according to a recent blog post by the Apple Machine Learning Research site and a Bloomberg report. <https://tinyurl.com/wxkpedce>

## Turn pets into humans

A quirky trend is quickly taking over social media, following the Ghibli-style AI animated image trend. Users

are now using AI tools to see how the humanised version of their pets would look like. Taking to X, thousands of users have shared humanised AI images of their pets, including golden retrievers, grumpy cats, and parrots, created with AI tools such as ChatGPT.
