

The TV has a very tight greyscale response. As for colour accuracy, we measured a delta error of 4.4 in SDR across our challenging colour checker test, which is good but not the best.

We noticed some sharpness and posterization artefacts at the start, but these were fixed after the latest software update. Overall, the TV performs really well for bright and usual SDR content.

In HDR, the colour accuracy is better, but the luminance from the mini LED backlight is not always spot on, resulting in additional luminance errors. Colours in HDR feel very tastefully boosted, which will appeal to the majority of consumers, if not the purists. Bright and vivid scenes as in animated content, feel very appealing. Extremely bright high-lights at times appear burnt.

The brightness and wide colour gamut have a noticeable impact in uplifting the experience. Bright HDR scenes have that pop, which is often missing in colour-accurate modes. For scenes like the bright hallways in *Severance* or scenes with snow, Vision 9 can make other TVs feel dull.

The mixed HDR scenes are reproduced really well.

The TV struggles with overly dark scenes in both SDR and HDR. In SDR, we noticed that the dark scenes had a bluish tint. In HDR, we noticed that black details are slightly crushed, which also makes the dark skin tones a bit unnatural.

Along with dark details, blooming artefacts are also suppressed. Blooming was noticeable only in a dark ambience and mostly when viewing from an angle.

Motion felt best with motion enhancement settings set to Low. And lastly, Lumio Vision 9 does a good job of upscaling legacy content.

All said and done, the picture quality of the Lumio Vision 9 is impressive for the price of ₹60 K. Tuning a mini LED backlight is no easy feat, and while there are areas to improve, brightness and colour richness act as brute forces to make up for minor inconsistencies and deliver a high-impact viewing experience for the price.

At the same time, don't expect the colour accuracy to be comparable to high-end flagships or the likes of Bravia 7, LG G4, or Samsung S95D, which also cost twice or thrice as much.

SOFTWARE

The software is clean Android 11, with some basic refinements. The Media Player app supports popular formats and HDR playback from external drives.

The TL;DR app is what Lumio adds to distinguish itself from regular Google TVs. You can see scorecards for popular sporting events here and the app also curates music playlists from YouTube if you'd like to quickly update yourself about what's new and happening.

This makes a lot of sense, and there is a lot of room for the app to evolve. Say, perhaps a playlist of content genres or a playlist of new movies this weekend across apps. That would save me a lot of time. Casting and screen mirroring worked flawlessly.

GAMING AND AUDIO

As for gaming, this TV covers the basics but doesn't venture into any extras. You get a 60Hz refresh rate and ALLM support. We tried gaming with PS5 and titles like *God of War*, *Ghost of Tsushima*, and *Spider-Man 2*. HDR is again very impactful in gaming. Our experience was smooth as expected. If you are an avid gamer, TVs with accelerated 144Hz or 120Hz modes in this segment offer a smoother experience.

The audio from 30w speakers is tuned really well. It is not particularly loud, and the bass is not particularly thumpy, but the audio here feels very refined. In complex scenes, the dialogue was clear. While listening to music, the soundstage felt wide.

DESIGN AND BUILD

The Lumio Vision 9 feels solidly built and comes with a sturdy metallic stand. The bezels are narrow, thus facilitating an immersive experience. The usual connectivity ports you'd need are present on the TV. The good thing is that these are extreme side-facing and will

be easily accessible even when you wall mount the TV.

The bundled remote is stocky and unique. It doesn't scream premium, but it is very comfortable to use. Most of the buttons I need are on the remote and are positioned well.

Lumio claims that they have paid special attention to ensure the service experience is smooth. From day one, the brand has 300+ Pan India service centres, with a 2-year warranty.

SHOULD YOU BUY IT

So the Lumio Vision 9 definitely punches above its weight and also offers an impressive performance for its price. This is a snappy TV as advertised, and it employs a good-quality and bright IPS LCD panel with a mini LED backlight. On the software front, the TL;DR app is a nice concept. The picture quality across HDR and SDR content is good, and you get tastefully boosted colours and should appeal to the masses. On the downside, there is room for improvement while portraying dark scenes.

Lumio has put serious thought into refining the experience and addressing common mid-range pain points. And that gives us reason to be optimistic about where the brand is headed. If you're in the market for a TV under ₹1,00,000, the Lumio Vision 9 delivers excellent value and is definitely worth considering.

—Deepak Singh

SPECIFICATIONS

Model: Lumio Vision 9 | Display: 55-inch, Mini LED | Panel Type: IPS-Level LCD | Display Resolution: 3840 x 2160 – 4K UHD | Panel Refresh Rate: 60Hz | Supported HDR Formats: HDR10, HLG, Dolby Vision | Speakers: 30W | Audio Formats: Dolby Atmos, Dolby Audio | Software: Google TV (Android TV 11) | Screen Mirroring: Chromecast built-in | HDMI: 3 HDMI ports, ALLM, eARC | Processor: Boss Processor (Realtek RTD2885M) | Storage: 32GB | Other Connectivity Options: 3x USB ports, Dual-band Wi-Fi 5, Bluetooth 5.1, AV, RF, Ethernet, headphone
