

in Geekbench single-core, and 2,988 in multi-core. These scores are slightly below what you typically get with other smartphones in the same price bracket, which makes the lack of a chipset upgrade more noticeable.

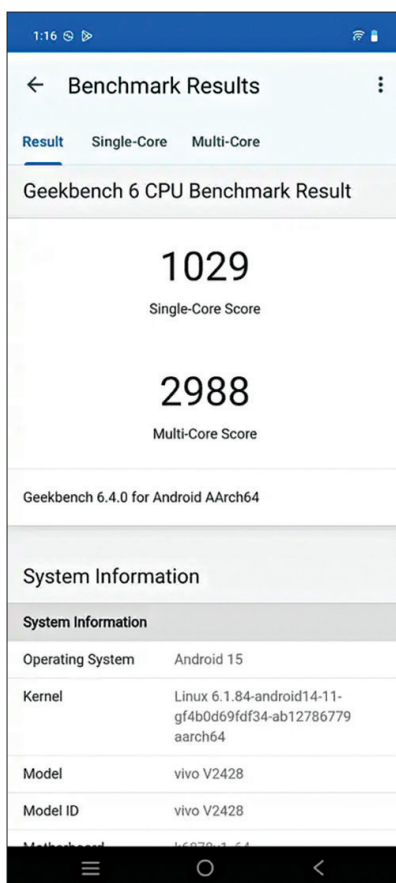

So in short, the Vivo V50e handles everyday tasks with ease, but power users or serious gamers might want to look elsewhere.

VIVO V50E 5G: CAMERA

Let's get to the cameras now. Vivo has always paid extra attention to this area, and the V50e is no exception. The phone comes with a dual-camera setup on the back, featuring a Sony 50-megapixel IMX882 sensor with OIS as the main shooter, paired with an 8-megapixel wide-angle lens. For selfies, it packs a 50-megapixel front camera.

Now, let's talk about how it performs in real life. Personally, I really liked the portraits it captured. The edge detection is neat, and the background blur looks pretty natural. That said, there were times when the camera over-optimised the shots, especially by deepening the blacks too much. Sometimes, this made the photo look more dramatic—in a good way. But other times, it felt a bit off for my taste.

For details, I'd easily give this phone a solid 10 out of 10. Whether you're clicking people or random objects in good lighting, it captures details really well.

Some shots may look a bit too vibrant—the kind of punchy colours that pop on Instagram but may not always be true to life. Still, the overall image quality is excellent and more than enough for most users.

VIVO V50E 5G: BATTERY

The Vivo V50e is packed with a 5600mAh battery with 90W wired charging support. In the PC Mark battery test, the V50e lasted an impressive 16 hours and 58 minutes. That's longer than several other phones in the same price range, which definitely speaks about Vivo V50e's battery optimisation.

To get more specific, the battery dropped just 2% during 30 minutes of HDR video streaming, which is honestly quite efficient. And you know how apps like Google Maps can drain the battery quickly—well, on the Vivo V50e, using Maps for an hour took only 4% of the charge. That's pretty great. As for charging speed, it took around 50 minutes to go from 0 to 100%, which is very reasonable.

VERDICT

The Vivo V50e is a stylish all-rounder that ticks most of the right boxes—especially if you're someone who values aesthetics, battery life, and camera performance. Performance-wise, it's good enough for everyday use, though the lack of a chipset upgrade may disappoint gamers or power users. That said, casual users won't face any hiccups during regular multitasking or streaming.

Where the phone truly shines is in its camera and battery departments. The 50MP main camera is capable of producing crisp, detailed images, and the large 5600mAh battery easily gets you through a full day.

Overall, the Vivo V50e is a good mid-range pick—just don't expect flagship-level gaming performance.
