

the BT.2020 colour space, our testing showed it falling short, achieving closer to 90% of BT.2020, which is still impressive but not quite as advertised.

For gaming, the Theater Premium offers ALLM (Auto Low Latency Mode) and a Game Mode that reduces input lag significantly.

The projector does accept 1080p signals at 120Hz, though it cannot display 4K at 120Hz due to the limitations of its single-chip DLP architecture.

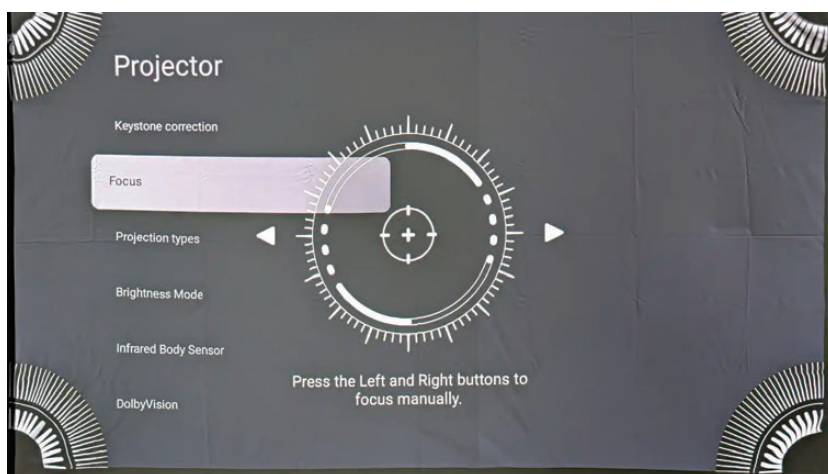

BRIGHTNESS AND CONTRAST

Even in rooms with some ambient light, the brightness of the projector was impressively strong, delivering vibrant colours and sharp details. In Standard mode, the Theater Premium produced vibrant, punchy imagery, making it much more versatile for everyday use rather than being restricted to dedicated light-controlled environments.

The contrast performance remains one of this projector's strongest suits. In dark scenes from films like *The Batman*, *Interstellar*, *Nosferatu* and shows like *Mr Robot*, *Daredevil Born Again*, the projector rendered shadows with impressive depth while maintaining detail. Black levels aren't quite OLED-TV deep, but they're excellent for a projector, creating a cinematic experience that feels properly immersive.

HDR PERFORMANCE

The Theater Premium projector supports a comprehensive range of HDR formats, including HDR10, HDR10+, Dolby Vision, and HLG. When displaying properly mastered HDR content like *Dune: Part Two* or 4K HDR videos on YouTube and apps like Netflix and Prime Video, the projector created an impressive spectacle with its brightness and contrast.

AUDIO QUALITY

The Bowers & Wilkins sound system is impressive for built-in audio. With two 15-watt speakers featuring titanium dome tweeters and mid-bass drivers, along with a side-firing bass reflex port, the Theater Premium produces rich, detailed sound with surprising bass presence.

The system supports Dolby Atmos and DTS:X via virtualisation, creating a convincing sense of spaciousness with surround sound. The Theater Premium's speakers are more than capable as a standalone solution for most users.

UI & SMART FEATURES

The Google TV interface is intuitive and visually appealing, with content recommendations and a unified search function that works across different streaming platforms.

Perhaps the most welcome addition is native Netflix support. Switching between Disney+, Netflix, YouTube, and Prime Video felt effortless. The included Bluetooth remote is functional if somewhat basic, and voice search via the remote worked consistently, unlike some other smart remotes I've used.

VERDICT

At a street price of ₹3,80,000 (MSRP ₹4,75,000), the Formovie Theater Premium is a significant investment, but one that delivers a genuine cinema experience in your home. It occupies a competitive position in the premium

UST projector market, yet its contrast ratio, brightness, sharpness, and audio quality are all impressive.

If you've been considering making the leap to a UST projector, the Formovie Theater Premium offers a compelling combination of performance, features, and value that's hard to beat in today's market. But to truly unlock its potential, I'd highly recommend going all-in on a proper home theater setup, which means investing in comfortable recliners, soundproofing, ambient lighting, and a high-quality surround sound system. With the right setup, this projector doesn't just replace a TV, but it transforms your space into an immersive cinematic experience that rivals your favourite movie theater. Just be prepared for one unexpected consequence: your friends may never want to watch movies anywhere else again.
