

In real-world use, the phone holds up well. COD Mobile and BGMI ran consistently at 90fps in my testing, with no noticeable drops even during longer sessions. Genshin Impact ran at a solid 60fps without crashing or overheating, though you can feel the back getting warm after about 20-30 minutes of gameplay. Nothing alarming, just a reminder that thin phones still have thermal limits.

If anything, Samsung's custom vapour chamber, graphite tape, and thermal interface layers seem to be doing a decent job keeping things from spiralling. But I'll say this, sustained performance isn't the S25 Edge's strongest suit. It's a flagship for most things, but not the kind of phone I'd reach for during long gaming marathons or intensive creative workloads.

Still, for its target audience, the kind that wants smooth multitasking, quick app launches, and enough graphical muscle for casual to moderate gaming, the S25 Edge delivers. Just don't expect it to stay cool while flexing hard.

BATTERY LIFE

Here's where the thinness starts to show its cost. The Galaxy S25 Edge comes with a 3,900mAh battery and sure, it's only 100mAh less than the regular S25, but in a device this slim, every milliamp hour counts, especially since it's pushing a QHD+ panel and flagship-level internals.

Samsung claims you'll get "a full day" of use, and... that's mostly true if your day doesn't involve too much gaming or constant camera use. In casual day-to-day use (social media, YouTube, checking emails, and lots of WhatsApp texting), I was hitting around 10-11 hours of screen-on time, which is actually better than I expected.

In the PCMark Battery Life test, the S25 Edge clocked in at 12 hours and 35 minutes, which puts it just behind the S25 (12 hours and 48 minutes) and S25+ (12 hours and 51 minutes), and not that far off from the bulkier S25 Ultra, which hit 11 hours and 50 minutes. So for a phone this slim, that's a solid result.

Charging isn't blazing fast either. Samsung's 25W wired charging claims 55% in 30 minutes, and in my own test, it took 1 hour and 19 minutes to go from 0 to 100% using a compatible charger. You also get 15W wireless charging, which is just fine. Not impressive, but not a dealbreaker either.

Look, the battery's okay. Not great. Not awful. Just... okay. And when you're this thin, "okay" is kind of a win. For light to moderate users, it'll hold up surprisingly well. But if you're pushing it hard or constantly on mobile data, you'll start to feel the ceiling.

CAMERA

The Galaxy S25 Edge doesn't reinvent the wheel with its camera setup, and that's probably for the best. It borrows tried-and-tested hardware from across the S25 lineup: a 200MP ISOCELL HP2 main sensor from the Ultra, a 12MP ultrawide with autofocus from the S25/

S25+, and a familiar 12MP selfie camera used across the board. What's new is how Samsung's managed to shrink the internal camera components by up to 13%, helping the Edge stay this thin without ditching flagship optics.

In daylight, the main camera delivers consistently good results with sharp detail, natural colours, and excellent dynamic range. You'll find that the image quality is nearly identical to the S25 Ultra. There's no dedicated zoom lens, but the 2x crop zoom is quite decent, especially in well-lit scenes.

The portrait mode works as expected and lends a natural-looking bokeh to images with great subject segmentation across different scenarios. The ultrawide camera is solid and autofocus is a nice touch, especially for close-up shots.

Night mode helps the main camera, but ultrawide night shots remain a weak spot, night mode enabled or not. The 12MP selfie camera sensor continues to do well with accurate skin tones and a wide dynamic range.

VERDICT

The S25 Edge isn't Samsung's answer to what everyone wants, it's their answer to what some users might not even realise they want. This is a phone that'll speak to a certain kind of user, someone who values a lightweight, premium design, is okay with charging more often, and wants something that doesn't feel like every other brick in the market. If that sounds like you, the S25 Edge makes a strong case.
