Android 16 & Wear OS 6 unveiled at Android Show 2025

At Android Show 2025, Google unveiled Android 16 and Wear OS 6, bringing smoother UI animations, redesigned widgets, and stronger security. A central theme of the upcoming updates is a major design refresh for both Android 16 and Wear OS 6, dubbed "Material 3 Expressive," which builds upon the Material You principles introduced in 2021. A major highlight is the new Find Hub, which merges Find My Device with other services -- supporting phones, wearables, earbuds, and even smart tags. Wear OS 6 also promises better battery management and seamless app syncing. Read more about these Android updates: tinyurl.com/doird90

iOS 19 & iPadOS 19: Big language and input upgrades

Apple's next software update -- iOS 19 and iPadOS 19 -- might bring some culturally impactful features. A bi-directional Arabic-English keyboard is in testing, enabling

seamless bilingual typing. Meanwhile, Apple Pencil users could get a "Virtual Reed Pen", simulating Arabic callig-

raphy strokes for creative professionals and artists. According to Bloomberg's Mark Gurman, these features "play into Apple's ambitions for the United Arab Emirates, Saudi Arabia, and India," where the company has recently been expanding its retail footprint. Meanwhile, Gurman previously reported that iOS 19 will also bring AI-powered battery optimisation and cross-device sharing of public captive Wi-Fi network details. The company is also expected to redesign the look of iOS in version 19. The update will likely change the style of icons, menus, apps, windows and system buttons. Gurman called this the biggest design update since iOS 7. Can barely wait for WWDC, am I right or what? tinyurl.com/138vbioe

Samsung confirms One UI 8 rollout plan

Samsung has officially confirmed that One UI 8 -- based on Android 16 -- will roll out starting Q4 2025. The update will first hit flagship S and Fold series phones, followed by mid-range models. It has Google AI integration, lock screen widgets, and smart privacy controls.

Amazon satellite internet in India soon?

Amazon is preparing to enter India's satellite broadband space via Project Kuiper. The company has filed for approval from India's telecom regulator to offer satellite-based internet, likely competing with Elon Musk's Starlink. tinyurl.com/9gqe41

Govt warns Google Chrome users!

CERT-In (India's cybersecurity agency) has issued a critical warning for Google Chrome users, urging them to update to the latest version. The flaws allow attackers to gain system access via specially crafted websites. Google has already patched the vulnerability. tinyurl.com/yq3g8eh
