

■ CLEVER NEW FEATURE

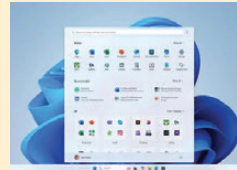

Google Maps for iPhone now scans screenshots

i Phone users can now leverage Google Maps' new screenshot scanning tool, which detects locations in screenshots and offers to save them directly. This AI-powered feature eliminates the need to copy/paste addresses or manually search – saving time and effort. According to

Google, this update will help users plan trips more seamlessly by keeping track of destinations without the need for manual note-taking. To access this feature, users will be required to allow access to all photos, or they can manually select images that they want to be scanned. The feature is off by default, and users will have to allow Maps access to the gallery. Notably, this feature is currently available to iOS users across the US only. The feature is now being gradually rolled out to all iPhone users in the country. To access the new Google Maps feature, users will have to go to the 'You' tab in the Google Maps app and click on the Screenshots list. Then, they will be asked to allow access to the Photos app, and Google Maps will start scanning screenshots for locations. Once found, a message will pop up asking users to review and save the locations in the list. Know more here: tingurl.com/3ot9h1

Microsoft finalises Windows 11 start menu redesign

After testing five prototypes, Microsoft has locked in a new Start Menu design for Windows 11. Expect rounded app icons, AI-based smart

search, better folder management, and tighter integration with Copilot and widgets. The redesign will roll out later in 2025. Read more about it by visiting this link: tingurl.com/mc913w

WhatsApp testing private message summaries

WhatsApp is reportedly working on a Private Message Summarisation feature. This could allow users to receive AI-generated summa-

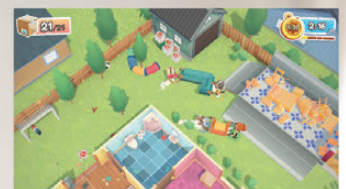

ries of long or unread messages, helping users catch up on group chats or important conversations with a tap. The feature is being tested on Android and iOS.

As per the report, Meta has designed the feature with privacy at its core, leveraging secure computation methods and end-to-end encryption, which means it may not raise privacy concerns. The message summarisation can be helpful to the users, especially useful for users who are a part of active group chats or busy channels. This will offer a quick way to catch up without manually scrolling through the big conversations. Since the feature is already in beta, it could make its debut with the upcoming stable updates within the coming weeks. tingurl.com/wa23mca
