

Cooler Master

At Computex 2025, Cooler Master unveiled its “One Cooler Master – Where Cooling Drives the Future” vision at its Taipei headquarters, blending enterprise-grade and consumer-focused innovations. The company introduced advanced cooling solutions for AI data centers, featuring 3D vapor-chamber cold plates and liquid coolant-distribution units designed for high-performance computing in AI, finance, and telecom. For consumers, the V Series air coolers, including the robust V8 Ace and compact V4 Alpha, bring server-grade stability to mainstream PCs.

The MasterLiquid Atmos II AIO cooler offers a quieter pump and customizable Flex-Kit modules for enhanced VRM cooling or real-time system stats. The budget-friendly Elite Series, with cases like the Elite 302 and 600, and 240/360 AIO coolers, targets system integrators and cost-conscious builders. Embracing modularity, the FreeForm 2.0 philosophy drives the MasterFrame 600 and QUBE 500 Core cases, supported by open-source design resources on Prusa Printables. A refreshed COSMOS case series and a COSMOS Infinity 30th Anniversary Edition contest, open until May 23, highlighted Cooler Master's commitment to personalization and performance. Fans on X praised the modular designs and AI-ready cooling, cementing Cooler Master's role in shaping the future of PC building.

Gigabyte

Gigabyte's AORUS RTX 5090 AI BOX, dubbed the world's first desktop eGPU, was a standout, offering external high-end graphics performance to a broader user base, including creators and AI developers. The AI TOP ATOM Supercomputer targets compact, scalable AI computing, showcasing Gigabyte's drive to support next-gen workloads. Additionally, the X870 X3D motherboards were unveiled with advanced power delivery systems and cooling optimizations, engineered for AMD's latest Ryzen CPUs. The Project Stealth initiative took cable management to new levels by introducing hidden-connector motherboards and GPUs, aimed at aesthetics and airflow improvement.

ASRock

The X870E Taichi OCF motherboard, designed for overclocking, leads ASRock's AMD AM5 lineup, alongside the gaming-focused Phantom Gaming X870 Nova WiFi and creator-oriented X870 Taichi Creator. ASRock's new PSU series (Taichi, Phantom Gaming, Steel Legend) supports Intel ATX 3.1 and PCIe 5.1, offering 200–235% peak power and 12V-2x6 cables for next-gen GPUs, backed by a 10-year warranty. ASRock also introduced compact DeskMini B860 (Intel) and DeskMini X600/USB4 (AMD) mini PCs for versatile applications. Their collaboration with Corsair achieved a DDR5 world record of 12,832 MHz using the Z890 Taichi OCF motherboard, demonstrating OC excellence.

Corsair

Corsair unveiled an impressive lineup of products at Computex 2025. The FRAME 5000D case, an evolution of the 4000D, supports 420mm radiators and features the Infinirail Fan Mounting System and RapidRoute 2.0 for seamless cable management. The AIR 5400 introduces a triple-chamber design with ducted airflow and wraparound glass, while the FRAME 4500X offers a curved glass panel for stunning visuals. Corsair also introduced the Stream Deck Module for Elgato's ecosystem and a PCIe 5.0 riser cable. A DDR5 world record of 12,832 MHz was achieved with ASRock, showcasing Corsair's Vengeance RAM prowess.
