

COMPUTEX 2025: Where the Future of Tech Begins

Mithun Mohandas | editor@digit.in

COMPUTEX 2025, Asia's largest and most influential technology trade show, once again took centre stage at the Taipei Nangang Exhibition Centre, transforming Taiwan's bustling capital into the global epicentre of innovation. Held from June 3rd to June 7th, this year's event attracted record numbers, with more than 86,000 buyers from 152 countries and regions converging to experience the future of technology firsthand. Over 1,400 exhibitors from 34 countries showcased their latest breakthroughs, making COMPUTEX not just a trade show, but a crucial nexus for the world's most forward-thinking companies and individuals.

This year's theme, "AI Next," signalled a seismic shift in the industry's trajectory. AI is no longer a buzzword or a niche feature—it has become the foundational layer upon which all modern technology is built. From chips and PC to industrial automation and consumer electronics, AI's universal.

Key Trends of Computex

AI Everywhere

The most pervasive trend at COMPUTEX 2025 was the omnipresence of artificial intelligence. In 2025, AI

is embedded in everything—from the smallest wearable devices to the most powerful supercomputers. Companies like NVIDIA, AMD, MediaTek, and Qualcomm unveiled new chipsets and platforms designed to bring AI capabilities to the edge, enabling real-time processing and decision-making on devices themselves.

Smart Computing and Robotics

At COMPUTEX, visitors witnessed demonstrations of robotic arms assembling delicate electronics, autonomous mobile robots (AMRs) navigating

crowded exhibition halls, and even biomimetic robot dogs performing complex tasks. These advancements are not just about automation—they represent a new era of human-machine collaboration, where AI-powered robots work alongside people to boost productivity and safety.

Next-Generation Technology

The relentless march of technological progress was evident in the new generation of processors, GPUs, and memory solutions unveiled at the show. Leading chipmakers showcased their latest offerings, pushing the boundaries of performance and efficiency. Wi-Fi 7 and early glimpses of 6G connectivity promised faster, more reliable wireless networks.

Future Mobility

Smart transportation solutions, electric vehicles (EVs), and intelligent infotainment systems were on full display, with companies like MediaTek and NVIDIA showcasing their latest automotive platforms. These technologies are not only making vehicles smarter and safer but are also paving the way for a future of autonomous driving. **d**
