

MAJOR ANNOUNCEMENTS & KEYNOTES

Headline Keynotes: Setting the Stage for Innovation

COMPUTEX 2025 kicked off with a series of high-profile keynotes that set the tone for the entire event, bringing together industry titans and unveiling bold visions for the future of technology.

NVIDIA: Building the AI Factories of Tomorrow

Jensen Huang, CEO of NVIDIA, emphasized that we are now entering the age of “AI factories”—vast, interconnected ecosystems where data is

processed, transformed, and turned into actionable intelligence. NVIDIA's new DGX Spark systems were a highlight, designed to accelerate large-scale AI model training and inference. Huang also introduced the latest iteration of NVLink Fusion, a breakthrough in chip-to-chip communication that promises to eliminate bottlenecks in high-performance computing. Partnerships with key tech brands played a central role in NVIDIA's keynote as well.

MediaTek: Powering the Edge-to-Cloud AI Revolution

Dr. Rick Tsai, CEO of MediaTek, highlighted the importance of bringing AI capabilities to the edge, enabling devices to process data locally while seamlessly connecting to cloud resources. This approach is critical

for applications in automotive, smart homes, and industrial IoT.

AMD: Redefining Performance for AI and Gaming

The Radeon RX 9060 XT was unveiled, bringing RDNA 4 based graphics to the masses. Along with the consumer

cards, we also saw some of the enterprise offerings in the form of the Radeon AI PRO R9700.

Notable Product Launches: From AI PCs to Supercomputers, a glimpse of tech extremes

AI PCs and Laptops

Acer and MSI were among the major brands showcasing their latest AI-powered PCs and laptops. Acer's Copilot+ PCs, featuring advanced AI assistants integrating with Microsoft's ecosystem.

MSI's Panther Lake prototypes generated significant buzz, offering a

glimpse into the future of ultraportable computing.

Supercomputers

NVIDIA's DGX Spark systems were not the only supercomputing solutions on display. MSI's EdgeXpert workstations, designed for AI development and

data science, attracted attention from enterprise buyers.

Palit's Pandora AI workstation was another highlight, offering a modular design that allows users to customize their hardware for specific AI tasks.

GPUs and Chips

NVIDIA's RTX 5060 graphics card was unveiled, with significant improvements in ray tracing and AI-graphics. AMD's Radeon RX 9060 XT redefines gaming and creative workflows.

Intel made waves with its Arc Pro B60 and B50 GPUs, targeting professionals who need higher performance.
