Beyond smartphones: Google Gemini coming to watches, cars, XR, TVs

In the coming months, Google will bring Gemini to Wear OS smartwatches, enabling users to access AI assistance directly from their wrists. In vehicles, Google is overhauling the Android Auto and Google Built-in experience with Gemini. Later this year, Google TV will receive Gemini capabilities, with a focus on personalised recommendations and educational content. Google is also bringing Gemini to Android XR, its newest platform developed in collaboration with Samsung for headsets, glasses, and other extended reality devices. Are you excited about Google Gemini now coming to all these new form factors? tinyurl.com/35xn5dmv

Claude 4: Anthropic's thoughtful AI, Opus & Sonnet

Anthropic has released Claude 4, its latest family of AI models featuring Claude Opus 4 and Claude Sonnet 4. Designed to handle everything from software engineering to extended problem-solving, these new models offer clearer task memory, improved tool use, and deeper reasoning. Whether you're debugging a large codebase, building an AI agent, or just trying to write more efficiently, Claude 4 introduces meaningful improvements for both technical and general-purpose users. Take a closer look at what makes these models different—and how they fit into the broader landscape of AI tinyurl.com/4e9mkpjb

AI will write most of Meta AI code

After launching the Meta AI app, CEO Mark Zuckerberg predicted that most of the company's AI code will soon be written by AI itself. Meta already uses AI tools for code genera-

tion and debugging. As more companies adopt AI in their workflows, it will be interesting to see how autonomous agents evolve to independently write, test, and optimize code. tinyurl.com/3swsxz79
