

Google I/O 2025: Top AI features announced that will launch soon

Everything you need to know about Google's AI efforts

—By **Ayushi Jain**

Google hosted its much-anticipated I/O 2025 keynote last month, with AI taking center stage. The company unveiled a wide range of AI-powered tools set to transform how we search, create content, and shop online.

AI Mode for Search is rolling out

Starting this week, all US users can access AI Mode—a new tab that lets you search the web using Gemini. This summer, Google will test deep search, chart creation for finance and sports queries, and roll out shopping features in AI Mode.

Project Starline becomes Google Beam

The 3D video chat tool now renamed Google Beam will launch inside an HP-branded device featuring six cameras and a light field display for 3D visuals.

Imagen and Veo upgrades

Google unveiled Imagen 4, an AI with

better text rendering and support for more formats. Its video model, Veo 3, lets users create videos with sound.

New AI filmmaking app: Flow

Google introduced Flow which combines Veo, Imagen, and Gemini to generate short videos.

AI in Chrome and Gmail

Gemini is coming to Chrome for AI Pro and Ultra users, offering page summaries and navigation help. Gmail will offer replies tailored to your inbox and tone.

Search Live and Project Astra updates

Search Live lets you point your phone

camera at something and chat with Google AI in real time. Project Astra can now speak aloud what it sees, like spotting errors in your homework.

Google Meet gets AI speech translation

Google Meet is introducing a feature that instantly translates your speech into your conversation partner's preferred language. Currently, it supports English and Spanish and is in beta for Google AI Pro and Ultra subscribers.

Smart shopping features

Google is testing a feature that lets you upload a full-length photo to preview how clothes would look on you. The AI understands body and clothing details, and Google plans to have AI handle shopping and checkout too.

Android XR glasses

Google showcased Android XR-powered smart glasses that let users message friends, book appointments, get directions, take photos, and even do live language translation.
