

Next, we did a 15-minute stress test on this smartphone, where again it scored brilliantly. During these 15 minutes, the CMF Phone 2 Pro kept its performance stable with negligible dips.

So overall, in benchmarks, the CMF Phone 2 Pro is solid but not the best. Phones like Oppo K13 and iQOO Z10 edge it out on paper. But again, it doesn't feel slow or weak, it's just numbers, unless you're gaming hard.

Speaking of gaming, the CMF Phone 2 Pro claims 120 FPS support in BGMI, but only if this claim is true. While I was playing BGMI on this smartphone, we recorded an average of 80 FPS of gameplay, which even went down to 60 FPS during a heavy gunfight. So you can purchase this smartphone if you are a casual gamer, but if you game hard, there are other options in the market.

SOFTWARE UI

The CMF Phone 2 Pro runs on the Nothing OS 3.2, the clean, minimalist UI you get on the Nothing phones. It's fast, bloat-free, and super smooth. You can even choose between a stock Android feel or the funky Nothing UI during setup.

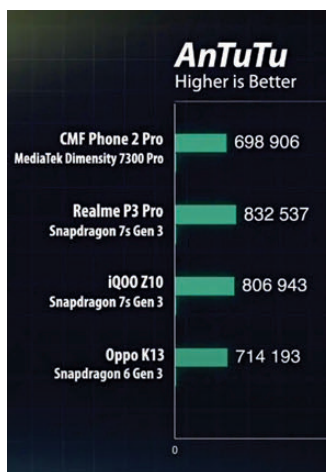

You get two years of Android updates (could've been more), and Google's AI suite is onboard too, like Circle to Search. CMF also adds Essential Space, which is triggered with the help of Essential Key on the right side of the frame, where you can save ideas, voice notes, and screenshots instantly.

CAMERA

Unlike last year's CMF Phone 1, you get three cameras with the CMF Phone 2 Pro – a 50MP main sensor, a 50MP telephoto sensor with 2x optical zoom, and an 8MP ultrawide sensor.

In daylight, this smartphone captures social media-ready photos. Colours like the bright magenta in the bougainvillea and lush greens really pop without looking unnatural. Users who prefer a slightly saturated look, with bright and punchy pictures will like it.

The best use case of its telephoto for me is clicking portraits. Portraits have

excellent edge detection and creamy background blur. Although the skin tones could be better, as it seems over-saturated and a bit smooth.

And lastly, low-light shots. The CMF Phone 2 Pro performs well in low light for its price. The main sensor captures warm, detailed shots with good noise control. It highlights a clip in tricky lighting, and the dynamic range could be better. The colours lean warm, and finer textures sometimes get smudged, but in some pictures, we get to see good details in textures as well. This means, while clicking low-light shots, you need to keep your hands really steady.

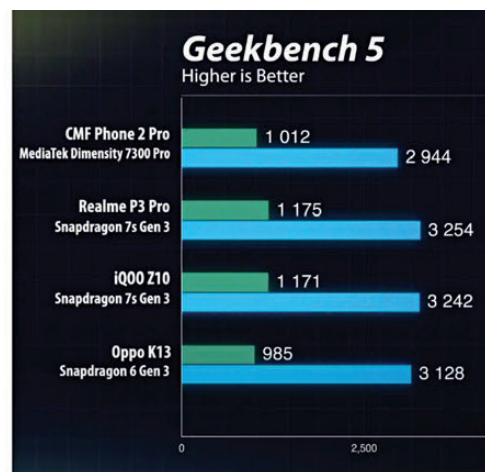

In short, cameras are fine. Not amazing, not bad. Perfectly serviceable for your Instagram Stories or late-night cafe reels.

BATTERY

Although the 5000mAh battery on the CMF Phone 2 Pro is reliable, the battery capacity could have been at least 5500mAh, following the latest trend of big batteries. But with this 5000mAh battery, you can easily get through a full day with 10-20% left in the tank. During our test:

- 1 hour of Google Maps consumed 7% of its battery.
- 15 minutes of BGMI consumed 5% of its battery.
- 30 minutes of high-quality video streaming consumed 5% of its battery.

Charging this smartphone from 0 to

100 percent takes about 70 – 74 minutes with its 33-watt fast charger that is, yes, included in the box.

FINAL VERDICT

The CMF Phone 2 Pro isn't here to win spec wars. It's here to make a statement. It's definitely for the Gen Z crowd or anyone who wants a phone that looks different, feels fresh, and does all the essentials well.

Yes, the camera is average, the performance isn't top-tier, and a stereo speaker setup would have been ideal. But in exchange, you get style, modular fun, clean software, and one of the best displays in the segment. And if that's your vibe, then with this price, the CMF Phone 2 Pro is hard to ignore!

–Mustafa Khan

SPECIFICATIONS

Screen: 6.77-inch AMOLED 120Hz | Camera: 50MP (wide), 50MP (telephoto), 8MP (ultrawide), 4K@30fps video | SoC: MediaTek Dimensity 7300 Pro | RAM: 8GB | Storage: 256GB | OS: Android 15 | Card slot: microSDXC | Battery: 5000 mAh, 33W charging speed
