

BATTERY LIFE

The Edge 60 Pro has a 6,000mAh silicon carbon battery, a notable upgrade over the 4,500mAh unit in the previous generation without adding extra bulk, and it shows.

I didn't charge this phone for an entire day, with normal usage, including Instagram, Spotify, Chrome, and a little YouTube, and the screen was set to 120Hz all day. It still had juice.

And despite the wired charging being downgraded from 125W to 90W, it still goes 0 to 100% in about 50 minutes. Wireless charging at 15W is a nice bonus. Especially since most phones in this price don't even bother.

CAMERAS

This is where Motorola quietly got serious. No gimmicks, no meaningless 2MP fillers. Instead, we get:

- **Main:** 50MP Sony LYTIA 700C
- **Ultra-wide + Macro:** 50MP (with autofocus!)
- **Telephoto:** 10-megapixel 3x optical
- **Selfie:** 50-megapixel (fixed focus)

Daylight shots are clean, the dynamic range is excellent, and the colours are surprisingly natural. The ultrawide is possibly the best in this price class. No distortion, and great detail, and you can get impressively close for macro-style shots. I really like

the portrait mode with perfect subject segmentation without losing details.

Low light is good, not great, especially on the ultrawide, which starts to soften up. But Motorola's Night Mode is overly aggressive when it comes to highlight controls and it starts to lose details with point-light sourced and neon signages that looks like it was AI-painted by DALL-E.

We also get 4K at 30fps (not 60fps) on all cameras. Stabilisation is decent, and colours stay consistent, but there's some focus hunting in low light and HDR scenes, especially on the telephoto and ultrawide.

The 50-megapixel selfie camera is sharp with accurate colour tones, as long as your face is at the right distance. Get too close or try group selfies, and the lack of autofocus becomes very obvious, especially when the Edge 50 Pro had that sorted.

VERDICT

The Motorola Edge 60 Pro is like that one kid in class who didn't follow the syllabus but still aced the project because they had surprising clarity of vision. It's a phone for people who don't want to be lumped into the same boring slab of specs that every other Rs 29,999 phone is offering. It dares to have a personality, and in 2025, that's a rare offering.

If you're the kind of user who wants a phone that feels different, craves a clean Android experience and prioritises display, battery, and everyday fluidity over raw FPS, then this is your phone.

But if you play a lot of heavy games or want a phone that feels expensive in the hand, not just looks, then you might want to explore elsewhere.

Some choices like downgrading the USB port and charging speeds, removing autofocus from the selfie camera, and skipping a case in the box for Indian buyers aren't dealbreakers, but they do reflect a few missed opportunities.

The Edge 60 Pro is a smart buy, it's not perfect, but bold and honestly we need more phones like this, just know where you're compromising.

—Siddharth Chauhan

SPECIFICATIONS

Processor: MediaTek Dimensity 8350 Extreme | GPU: Mali G615-MC6 | RAM: 8GB/12GB LPDDR5X | ROM: 256 GB UFS 4.0 | OS: Android 15 | Cameras (rear): 50 MP Sony LYT-700C + 50 MP Ultrawide + 10 MP Telephoto | Front camera: 50 MP | Display: 6.7-inch 1.5K P-OLED | Display refresh rate: 120 Hz | Battery capacity: 6,000 mAh | Charging: 90W | Colours: Pantone Dazzling Blue, Pantone Shadow, Pantone Sparkling Grape | Thickness: 8.2 mm | Weight: 186 g
