

is very comfortable to use. Most buttons I frequently need are positioned well.

As with every new brand, service is a concern. Lumio assures that from day one, the brand has 300+ Pan India

service centres operational, and they are offering a 2-year comprehensive warranty as well.

PERFORMANCE AND AUDIO

The Lumio Vision 7 uses the same Boss processor as the Vision 9. This is actually a RealTek processor (RealTek RTD2885M) that's backed by almost

3GB RAM and around 16GB of onboard storage, of which around 11GB is free for users.

This is certainly a snappy TV, and the snappiest we have experienced in the under 50K segment. So, yes, Lumio's performance claims hold good.

Vision 7 offers powerful audio, but we'd recommend you first disable Dolby Atmos from the audio settings. The dialogue clarity on the Vision 7 is pretty good in complex scenes. The speakers are nicely tuned. Of course, for an immersive cinematic experience, you'd need to invest in an external sound system.

SOFTWARE AND GAMING

The software is clean Android 11, and the standout feature is Lumio's TL;DR app, which curates trending music playlists and scorecards for popular sporting events. As I mentioned in my Vision 9 review, the TL;DR app feels

like a thoughtful addition, with plenty of potential to evolve in useful and interesting ways. Casting and screen mirroring worked flawlessly with Android phones, though Apple AirPlay is not supported.

As for gaming, this TV covers the basics but doesn't go beyond that. You get a 60Hz refresh rate and ALLM (Auto Low Latency Mode) support. If you're a serious gamer, TVs in this segment with 120Hz or 144Hz refresh rates will deliver a noticeably smoother experience.

SHOULD YOU BUY IT?

So, how do all these results add up in light of the competitive price of ₹39,999?

Well, we'd certainly recommend this as an option to buy. It has its flaws but these are shortcomings that also affect most affordable TVs. Nevertheless, it offers some unique advantages like a wide colour gamut, snappy performance hardware, and a picture mode with near-accurate Greyscale and white point. It should also appeal to consumers who prefer slightly saturated colour tones. At the same time, we are left with a lingering feeling that this one is not as disruptive as Vision 9.

—Deepak Singh

SPECIFICATIONS
