

Vivo T4 5G

It almost nailed it

If you're reading this, chances are you're hunting for a smartphone around ₹20,000. Well, the Vivo T4 5G might just be one of the best value-for-money smartphones of 2025. But, and it's a big BUT, it comes with its own share of pros and cons that are easy to miss. Read on to find out if it's the right pick for you.

DESIGN

What I liked about the design of this smartphone is that it packs a 7,300mAh battery, a massive battery that we haven't seen in a budget phone so far, but still manages to weigh 199 grams and measure 7.89mm in thickness. However, this became possible due to the integration of a carbon anode battery, which helps devices to be slim and lightweight by offering higher energy density in a more compact and lighter form. So, as far as the in-hand feel is concerned, I liked the design. It also has curved edges for a better grip and looks decent.

However, the grip reminds me of that huge camera bump on the back. It's a decent performance-centric budget smartphone, and chances are that many youngsters purchase this smartphone for gaming. That's where the camera bump can feel uncomfortable when holding it horizontal for gaming.

But it checks the durability box, as it features an IP65 rating against dust and water, a plastic back, and Schott Alpha Glass on the front.

DISPLAY

The Vivo T4 is equipped with a FHD+ 6.77-inch AMOLED display that supports 10-bit colour and a 120Hz refresh rate. The visuals this display produces are bright, sharp, and colour-accurate: all the things you'd expect from a good

AMOLED panel. Moreover, it also supports HDR, so watching content on OTT platforms such as Netflix and Prime Video is a pleasant experience. One thing that could have made this whole experience even better is the stereo speaker setup. Yes, the Vivo T4 features the outdated mono-speaker setup.

Apart from being visually appealing for this price, the display of the Vivo T4 is bright enough as well. During my outdoor usage, it didn't feel dull under direct sunlight.

In our display tests, the display hit 2250 nits of peak brightness in auto mode. An average Delta E of 0.9 in the sRGB colour space means the display is excellent for media consumption.

PERFORMANCE

The Vivo T4 5G is powered by the Snapdragon 7s Gen 3 processor, which is paired with up to 12GB of RAM and 256GB of storage. This phone properly utilizes the power of its processor, and

we got to know this by testing its power and the stability of that power.

In our AnTuTu benchmark test, the Vivo T4 scored close to 8,00,000 points — 795640 to be precise. According to its price, this number is decent. Last year, with the MediaTek Dimensity 7200, the Vivo T3 scored 7,16,106, so it's safe to call this an upgrade. Furthermore, in the Geekbench 6 test as well, the scores are nice.

After these benchmarks, I ran a 15-minute stress test called the CPU throttling test, which tells us how stable the performance is of a device. In this test, the Vivo T4 scored 93% out of 100%, and as you can see from this graph, it's almost entirely green. This means it'll maintain its performance and give you good results if you use it aggressively for 15 minutes constantly.

The Vivo T4 5G performed well when it comes to numbers, which also means a decent daily-usage performance. However, while playing BGMI, I noticed that this smartphone supports only 60 FPS gameplay.

Now, its close competitors, such as Realme P3 Pro and Nothing Phone 3a, come with 90 FPS support in BGMI, which certainly improves the gameplay as well. So, this could be another bummer for our gamer friends.

CAMERA

The Vivo T4 carries a dual camera setup with a 50MP main camera and a 2-megapixel depth sensor. On the front, it has a 32-megapixel selfie shooter as well.

After using the camera for a while, I feel that it delivers decent pictures for the price that you are paying. The colours are vibrant and saturated, something which most people like. Light management is also decent. Even in low light, you get bright and vibrant shots. However, the macro and close-up shots leave space for improvement as the camera struggled with the focus.

With the portraits, the pictures turn out decent. They are bright, but there is visible smoothening and brightening on the face. Edge detection and the bokeh could have been better.
