

Even with the selfies, the images turn out bright, but there is smoothing. However, in good lighting conditions, you can get good selfies.

BATTERY

I have been calling this phone smartphone-cum-power bank. I'll come to this part later because firstly, let me tell you that during our PC Mark battery life test, this smartphone lasted over 24 hours while only draining to around 20%, which means I could last even more. On moderate use, the Vivo T4 can last between two to three days very easily on a single charge.

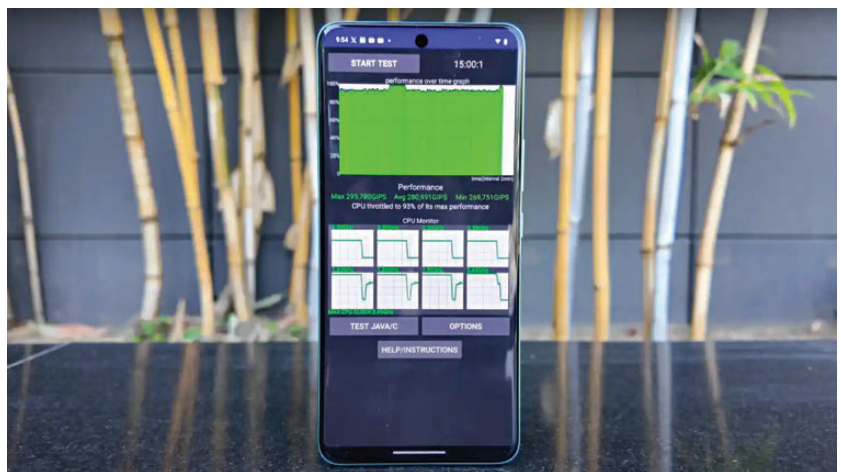

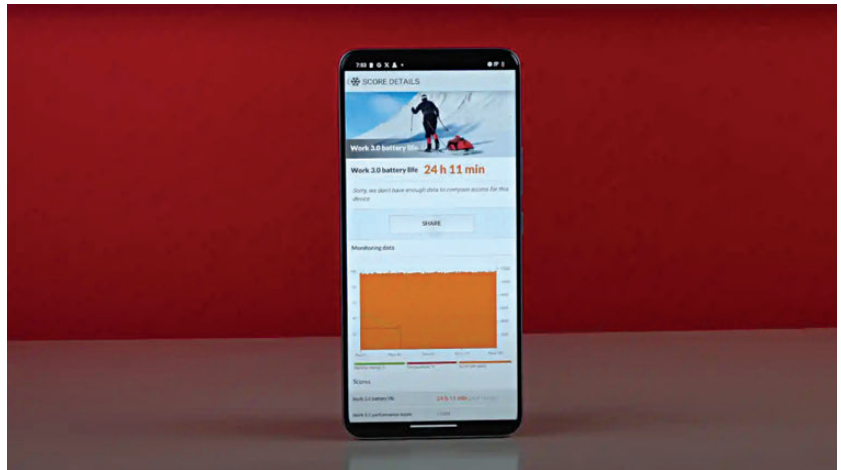

We also tested the massive 7,300mAh battery with a 15-minute BGMI match, 30 minutes of video streaming, and 60 minutes of Google Maps usage. Here's the consumption:

- BGMI (15 minutes) – 2% drop
- Video Streaming (30 minutes) – 4% drop
- Google Maps (60 minutes) – 4% drop

Coming to the charging now, you get 90-watt fast charging support on this smartphone. From 0-100%, you can charge this smartphone in less than 60 minutes. Now, why I call it a smartphone-cum-power-bank is because it also supports reverse wired charging, because why not, when you have this big battery on your phone?

FINAL THOUGHTS

So, let's recall all the major cons here once more: the Camera Bump, Mono

Speaker Setup, 60 FPS in BGMI, and Average Selfie Camera. If you ask me, all these cons are negligible in front of the Pros you are getting with this phone, including a sleek and lightweight design, vibrant display, solid performance, and a massive battery.

In our testing, the Vivo T4 5G proved that it's a good smartphone, and I also felt the same while using this smartphone; only if the price could have been under ₹20,000, it would be even better.

–Mustafa Khan

SPECIFICATIONS

Display: 6.77-in, 2392x1080 res, AMOLED | SoC: Snapdragon 7s Gen 3 | RAM: 8GB | Storage: 128GB | Camera: Rear - 50MP OIS + 2MP, Front - 32MP | Battery: 7300 mAh, 90W fast charge | OS: Funtouch OS 15 | SIM: 2 nano | Weight: 199g
