

generative AI for images, and more. So, while Nothing offers a unique AI touch, Motorola provides a more robust AI experience overall.

Design

First off, design. The Motorola Edge 60 Fusion feels sleek and elegant. It has a faux leather back that gives it a premium vibe, and its curved edges make it super comfortable to hold. Plus, it's lighter than the Nothing Phone 3a, which feels bulkier in comparison.

On the other hand, the Edge 60 Fusion also beats Nothing when it comes to durability, with an IP69 rating and Gorilla Glass 7i protection, while the Nothing Phone 3a only offers an IP64 rating and Panda Glass.

Performance

When it comes to performance, the Nothing Phone 3a shines a little

brighter. It beats the Motorola Edge 60 Fusion in both AnTuTu and Geekbench tests. On top of that, it also supports up to 90fps in BGMI. The Edge 60 Fusion is capped at 60fps.

In terms of stability, the Nothing Phone 3a also performs better in stress tests, maintaining consistent performance without throttling. So, if you're into gaming or heavy multitasking, Nothing is definitely the stronger contender here.

Camera

In the camera department, both phones offer solid setups. The Motorola Edge 60 Fusion has a 50-megapixel main sensor and a 13-megapixel ultrawide lens. The Nothing Phone 3a, on the other hand, has a 50MP main, 50MP telephoto, and 8-megapixel ultrawide camera.

For daylight shots, the Edge 60 Fusion wins with punchier colours and

better detail. However, the Nothing Phone 3a does a better job with HDR and light management, especially in tricky lighting situations. Nothing also has slightly better low-light performance as it captures more detailed and crisp shots compared to Motorola's slightly softer shots.

When it comes to portraits, the Edge 60 Fusion captures more natural skin tones and better overall sharpness, while Nothing's portraits are a bit more contrasty.

Battery

Despite the Edge 60 Fusion packing a larger 5500mAh battery, it falls short compared to the Nothing Phone 3a, which has a 5000mAh battery. Nothing outlasts Moto in our PC Mark battery test.

The Edge 60 Fusion lasted just 9 hours and 4 minutes, while the Nothing Phone 3a lasted 12 hours and 2 minutes. So, despite having a smaller battery, the Nothing Phone 3a delivers better battery backup.

Which one is a better phone?

To sum it up, both the Motorola Edge 60 Fusion and Nothing Phone 3a offer great value under ₹25,000. The Edge 60 Fusion is perfect for those who want a more premium design, a smooth UI, and a more natural display. It's a solid choice for daily use and delivers a good camera and AI experience.

On the other hand, if you want something that stands out with a bold design, cutting-edge performance, and top-notch gaming, then the Nothing Phone 3a is the phone for you. It offers excellent performance, a better gaming experience, and good battery life, making it a great pick. **🏆**
