Apple research claims popular AI models fail at hard reasoning

Apple has released new research accusing advanced generative AI models from OpenAI, Google, and Anthropic of failing at logical reasoning tasks. According to Apple researchers, most large reasoning models (LRMs) “give up” on hard puzzle-solving, exposing a significant flaw in the reasoning abilities of GenAI systems that have become widely used over the past few years.

In their paper, “The Illusion of Thinking,” Apple researchers reveal how LRMs fail on complex reasoning challenges. Using algorithmic puzzles as a benchmark, the study shows that while these models handle easy and medium problems well, they falter and abandon attempts once the difficulty crosses a certain threshold.

Meta AI app marks private chats as public, raising privacy concerns

Meta AI app’s Discover feed, in particular, has been laying bare users’ most private AI conversations for anyone to see. It wasn’t a one-off glitch. Over the past few weeks, privacy alarms have been blaring around Meta AI’s new app, and the leaks cut deeper than just an over-eager “share” button. Sharing an AI conversation is “opt-in” according to Meta, but as reported by TechCrunch, users are finding the opposite to be true. A single tap on a button in the AI interface will seemingly catapult your chat into a public forum.

Apple’s Siri AI update delayed to 2026

Apple is reportedly planning to release its delayed Siri upgrade in spring 2026. The new version of Siri, which is expected to be more intelligent and capable, will likely roll out with the

iOS 26.4 update. This marks a major step in Apple’s attempt to improve its artificial intelligence

offerings after falling behind rivals.
