

Secret Labs, Projector Mysteries, and Farewell Feels

June transformed into our month of grand adventures and operational chaos!

While Manas infiltrated Apple's most guarded secrets at WWDC: stepping inside their top-secret Durability Test Lab in Cupertino, Sid jetted off to Vietnam armed with a OnePlus Nord and an insatiable appetite for street photography. Manas returned with tales that read like tech espionage: witnessing brand-new iPhones getting tortured with synthetic sweat, artificial earwax, and Arizona desert dust before being blasted with water guns and subjected to granite drops. Meanwhile, our own Digit Test Labs finally roared to life with the Vivo T4 Ultra's camera enduring our rigorous scrutiny and the Poco F7 getting its performance benchmarks thoroughly dissected.

In Mumbai, monsoon fury picked up pace, as the quest to keep electronics dry went into overdrive. While the team has settled into the new office, and everyone's fallen in love with the canteen food (and its incredible value for money), they're still way behind schedule in unboxing all the packed boxes – needless to say, they're keeping the admins very busy with their demands. As with everything in Mumbai, space (or its lack thereof) remains the biggest issue.

But nothing – absolutely nothing – could compete with Abhishek's projector saga for pure comedy gold. Picture this: a delivery mix-up so perfectly orchestrated it deserves its own Netflix series. Our Abhishek's projector somehow found its way to another Abhishek in a completely different city,

delivered by a confident delivery person who apparently moonlights as a master of social engineering. The unsuspecting Random Abhishek not only accepted the mysterious projector delivery without question but did so with such main character energy that he's become an office legend. No verification, no confusion, just pure "Cool, projector for me" acceptance that has us questioning reality itself.

In between all of this, Mithun went on a secret AMD mission to the US that he's keeping fairly hush hush for now. He has seen AMD's future and will be giving us lesser mortals on how the chipmaker's manoeuvring through all the AI hype, beyond just CPUs and GPUs. Keep an eye out for his by lines on Digit.in to know more, you wouldn't want to miss out on it, for sure. We can't reveal specifics, but insiders whisper that his upcoming dispatches will map out AMD's AI roadmap like never before – expect deep-dive analysis sprinkled with surprise benchmarks and anecdotes from the frontlines of silicon innovation.

As June winds down, we're bidding farewell to Naba, the creative powerhouse who's been quietly revolutionizing our content game for over a year and a half. She's been the mastermind behind our Hindi YouTube channel's

explosive growth, while her ability to juggle text, video, and social media content made the rest of us question our multitasking abilities.

Working on the July cybersecurity issue had Vyom and Jayesh interviewing not just the good guys, but also scratch the seedy underbelly

of the web to know more about the invisible threat that's constantly trying to break through our cyber defences and hurt us though various means. While trying to install and run some white hacking tools on their company laptops, all

in the name of science, the company's IT department wasn't too amused with them. Their adventures reinforced one thing: in cybersecurity, curiosity can be just as risky as any malware payload.

Sagar continued his deep dive in all things laptop tech, significantly improving his knowledge on everything from what business laptops to buy to what Intel and AMD's co-processors can and can't do. Don't miss his by lines for everything laptops on Digit.in.

Between secret Apple torture chambers, Vietnamese cold brews, operational lab victories, and the greatest case of mistaken identity in projector history, June proved once again that truth really is stranger than any fiction we could manufacture. 

QUOTE
OF THE MONTH

"Liquid Glass"

—Uttered by everyone
way too many times
last month!
