

## ONEPLUS 13S BATTERY & CHARGING: EXCEPTIONAL ENDURANCE IN A COMPACT BODY

The OnePlus 13s isn't just about performance, it packs a huge 5,850 mAh battery, bigger than the iPhone 16 or Galaxy S25, all in a body just over 8mm thick.

In our PCMark test, it lasted nearly 22 hours, close to flagship endurance, easily a day and a half with heavy use. For a compact phone, that's excellent.

You get 80W wired charging that goes from 0 to 100 in under an hour. Pass-through charging is supported too, so the battery stays cool while gaming making it great for gamers.

The downside? No wireless charging. If you're used to dropping your phone on a charging pad, this might feel like a step back, especially when everything else feels so premium.

## ONEPLUS 13S CAMERAS: GREAT PERFORMANCE WITH A NOTABLE TRADE-OFF

The rear setup includes a 50MP main camera with a Sony LYT-700 sensor and a 50MP Samsung JN5 telephoto. The OnePlus 13s takes great photos and handles most everyday scenarios well. The catch? There's no ultrawide camera. If you shoot landscapes, group shots, or want that wider perspective, you'll miss it. It's a trade-off, telephoto or ultrawide, but not everyone will want to choose.

**Daylight Shots:** Most outdoor daylight shots, greenery, flowers,

even a black car in the shade—came out vibrant and detailed. Colours lean slightly boosted, but not overly saturated. It's that "social media ready" punch without losing realism. Dynamic range is solid too: highlights stay in check, and shadows keep good detail, even in tricky lighting.

**Close-ups and Portraits:** This is where it gets fun. Portraits look natural, and low-light shots are usable—if not best in class. Macro and close-ups of flowers have sharp focus, clean separation, and smooth bokeh. Rear camera portraits, especially in natural or soft indoor light, come out crisp. Edge detection on hair is better than expected, and skin tones stay true.

**Indoor and Low Light:** Indoor shots, like the mall's spiral ceiling lights, came out clean, with solid noise control. Even when zoomed in, roof textures hold up, and there's minimal colour fringing around the lights. Neon signage, like the Third Wave Coffee shots, was handled well too, minimal blooming and no major overexposure.

**Night Mode:** Night mode shots, especially of the Ferris wheel, were surprisingly usable. The image stacking feels well-processed. Colours pop just enough, and the images retain that glow without turning into a smudgy mess. You might notice some softness in the corners or darker areas, but the centre subjects, especially light sources, are sharp and clean, and it avoids over-processing, which is nice to see.

**Front Camera:** Selfies are fine for the most part, good detail, decent skin tone reproduction, but the HDR isn't always perfect. If you have a window or bright light behind you, it struggles a bit to balance exposure.

**Zoom & Detail Retention:** Zoomed-in shots, even at 2x crop, avoid aggressive processing. The burning wood in the oven, for example, retains texture, structure, and fire tones naturally, impressive for a phone in this segment.

## VERDICT

The OnePlus 13s doesn't try to be everything. It's a compact, performance-driven phone with a fantastic battery, a reliable display, and some helpful AI tricks baked in. If you're tired of oversized phones and want something fast, balanced, and easy to use day-to-day, this phone will serve you well.

But it's not perfect. The missing ultrawide lens, lack of wireless charging, and slight throttling under extreme load may be dealbreakers for power users. At Rs 54,999, there are other options like the Pixel 9a that trade raw power for cleaner software and better computational photography. All in all, the OnePlus 13s is for users who value comfort and compactness without compromising on speed or battery. It's not flashy, but it is thoughtful, and in 2025, that might just be enough.
