

12,851 on AI Benchmark, it is a solid upgrade over last year. Overall, the Razr 60 Ultra makes a strong case for itself if AI capabilities are on your checklist.

VERDICT

Motorola has certainly upped its game with this year's flip. The titanium-reinforced hinge increases durability, while the vibrant 4-inch cover screen and 7-inch LTPO pOLED main display combine style and functionality. The Snapdragon 8 Elite improves performance significantly, making everyday tasks and multitasking more efficient. The addition of AI features such as Look and Talk, Catch Me Up, and AI Image Studio

improves the overall package.

That said, at Rs 99,999, this sits firmly in the ultra-premium category. For users who prioritise camera performance or intensive gaming, more traditional flagship options like Vivo X200 Pro, Samsung Galaxy S25+ and Oppo Find X8 Pro might offer better value, depending on individual needs and usage patterns.

CAMERA

Motorola's Razr 60 Ultra comes with a 50MP main camera, 50MP ultrawide sensor, and a 50MP front camera, all backed by its Moto AI and Pantone Validated colour tone. While this sounds impressive on paper, real-world usage reveals mixed results. I was able to take some decent shots.

While daylight shots offer good detail, portrait mode often struggles with focus, and subject separation isn't always accurate. Colours tend to shift darker in challenging lighting, with high contrast affecting skin tones.

Low-light photography is another area that falls short, as images lose focus and dynamic range, despite the post-processing. The ultrawide and macro lens is versatile but lacks consistency in detail and colour accuracy.

BATTERY

The Razr 60 Ultra has a 4700mAh battery, which is impressive by flip phone standards. It allows for 68W fast charging, 30W wireless charging, and reverse power sharing as well.

In our tests, the phone charged completely in 55 minutes, which is relatively quick for this segment. More importantly, the battery life held up well, with close to 16 hours of screen time in the Work 3.0 Battery Life test.

This equates to more than a day of real-world use under normal conditions, including browsing, social media, and occasional camera use. It is a dependable all-day phone, making it one of the more practical foldables for normal use.

AI AND FEATURES

Motorola claims that the Razr 60 Ultra is the best AI flip phone. It offers a bunch of AI features like Look and Talk which allows hands-free interaction by simply glancing at the device, Catch Me Up 2.0, Pay Attention for live transcription, and Auto Screenshot Blur, which focuses on convenience and privacy. The AI Image Studio offers creative utilities such as text-to-image generation, sticker creation, and avatar design, which works fine.

With benchmark scores of 2,000,077 on AITUTU, 22,697 on Procyon AI, and

SPECIFICATIONS

Screen: 6.96-inch 2992x1224 resolution LTPO AMOLED display, 4-inch pOLED external | SoC: Qualcomm Snapdragon 8 Elite | RAM: 16GB | Storage: 512GB | Camera: 50MP + 50MP Rear, 50MP front | Weight: 199g | OS: Android 15 | Battery: 4700 mAh, 68W fast charge, 30W wireless charge | Others: Type-C port, IP48 dust and underwater protection
