

IQOO NEO 10

REALME GT 7

WHO WINS?

ONE BRINGS HEAT, THE OTHER BRINGS BALANCE

Mustafa Khan | editor@digit.in

Two new performance-focused smartphones are in the market- the Realme GT 7 and the iQOO Neo 10. What does that call for? Yes, a comparison! The iQOO Neo 10 is priced at ₹31,999 and the Realme GT 7 is priced at ₹39,999 and before you guys come at me and say that this comparison isn't fair because the iQOO Neo 10 is priced around ₹10,000 less than the Realme GT 7, let me tell you if you dig deeper, you'll see why this battle is closer than you'd think.

Rival chipsets power them both, and both smartphones bring flagship-grade specs at aggressive prices. So let's find out which one gives you more for your money?

Design and durability

Let's quickly talk about their designs first. Both the iQOO Neo 10 and the Realme GT 7 weigh the same at 206g. Both have a plastic build, but Realme edges ahead with Gorilla Glass 7i and an IP69 rating.

iQOO counters with a slimmer in-hand feel. It's a tie on premium feel; Realme is just better protected.

Performance: Snapdragon vs Dimensity

The iQOO Neo 10 runs on the Snapdragon 8s Gen 4 chipset, and the Realme GT 7, on the other hand, runs on the MediaTek Dimensity 9400e chipset. Both of these new chipsets are watered-down versions of their flagship siblings.

The same is true when it comes to their benchmark scores. On AnTuTu, both phones crossed the 1.5 million mark, but Realme pulled slightly ahead by nearly 1 lakh points. And even on the Geekbench test, Realme had the lead.
