Google confirms to merge Android and ChromeOS in future

Google has officially confirmed plans to merge its two core operating systems, Android and ChromeOS, into a unified platform, aiming to offer users a more seamless cross-device experience across phones, tablets, laptops, and wearables. The confirmation came from Sameer Samat, President of Android Ecosystem, in an interview with TechRadar, where he stated, "We're

going to be combining ChromeOS and Android into a single platform." While no timeline or technical roadmap has been shared yet, the merged system is expected to be based on Android, facilitating smoother transitions between mobile and laptop environments. This strategic shift comes as Android 16 rolls out with support for larger screens, desktop modes, better multitasking, and Material 3 Expressive, the most significant design revamp in years. The integration will also help Google better compete with Apple's tightly knit iPadOS and macOS ecosystem. With Chromebooks already supporting Android apps, the merger is less about reinvention and more about deepening cross-device cohesion within the Google ecosystem. <https://tinyurl.com/cos2adr>

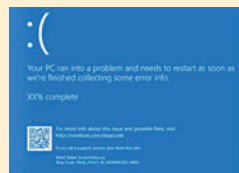

After Bitchat, Jack Dorsey unveils another new app

Jack Dorsey has launched another experimental app, this time targeting health and wellness. Called Sun Day, the app helps users track

sun exposure and estimate their Vitamin D based on location, UV index, skin type, and clothing coverage. Sun Day is an open-source project hosted on GitHub, reflecting Dorsey's ongoing interest in solo development and AI-assisted tools. It allows users to manually log sun exposure and uses local data to estimate safe sun time and Vitamin D synthesis. The app is part of Dorsey's broader experimentation with open-source AI, reportedly built using Goose, an AI-powered coding tool. <https://tinyurl.com/jd90sd>

Windows 11 now features Black Screen of Death

Microsoft has officially replaced its iconic Blue Screen of Death (BSOD) with a new Black Screen in the latest Windows 11 Release Preview build,

marking a major visual shift. The redesigned screen features a simplified layout with just an error message, code, and restart progress indicator. Alongside this change, Microsoft is rolling out new features including Quick Machine Recovery (QMR) for faster reboot after crashes, and accessibility tools like "Practice Reading in Coach" that can read aloud on-screen text. <https://tinyurl.com/w11bsd>
