

Qualcomm's gameplan for XR glasses in India

How Lenskart, Xiaomi are bringing smart AR glasses to India

Team Digit | editor@digit.in

In late July 2025, Qualcomm kicked off its Snapdragon for India XR Day event with one overwhelming objective – which was to accelerate the growth of spatial computing in the Indian market.

Qualcomm took this opportunity to showcase a range of innovations

across content capture, entertainment, fitness and education. The company also emphasised the growing need for spatial computing in today's digital landscape. At the event, Savi Soin, Sr Vice President & President at Qualcomm India, said that the company imagines a future where smart glasses

are just as essential to our daily lives as smartphones are today.

"Qualcomm Technologies envision a future where smart glasses become as integral to daily life as smartphones, seamlessly handling everyday tasks. Snapdragon platforms are engineered to deliver a balance of sleek, light-weight design with powerful functionality, making smart glasses practical and intuitive for everyday use," Soin said. "Aligned with the vision of Viksit Bharat, this technology will empower frontline workers, transform education in remote areas, and enable truly inclusive digital access."

Alex Katouzian, Group General Manager of Mobile, Compute & XR (MCX) at Qualcomm Technologies, took the stage to share insights on Snapdragon XR. He highlighted that Snapdragon XR platforms, which have already powered over 100 devices worldwide, continue to drive results across augmented reality (AR), mixed reality (MR), and virtual reality (VR).
