

ASUS NUC 15 Pro+

A compact powerhouse

The ASUS NUC 15 Pro+ embodies the idea that big things come in small packages. With an Intel Core Ultra 9 CPU, an Arc GPU, ultra-fast Wi-Fi 7, and a compact, VESA-mountable chassis, this mini-PC delivers on nearly every front.

It isn't just a technical show-piece. Thoughtful design choices such as toolless upgrades, intelligent cooling, proximity sensing via Wi-Fi, and wide display support, etc., make this a practical, everyday workhorse. It's ideal for tech-savvy professionals, remote workers, and developers running AI workloads locally.

The pricing will determine its fate to an extent, but if ASUS keeps it near the ₹1.4-1.5 lakh mark, the NUC 15 Pro+ becomes a compelling alternative to bulky desktops and under-powered laptops. If you're looking to combine performance and flexibility into a palm-sized package, the ASUS NUC 15 Pro+ is more than ready.

At the heart of the NUC 15 Pro+ lies the new Intel Core Ultra 9 285H processor, which combines P-cores, E-cores, and a low-power cluster for efficient multitasking. This processor also brings Intel's latest AI compute unit into play with up to 99 TOPS (Int8), making this mini-PC capable of handling AI-assisted workloads locally. Whether you're a developer running local LLMs, a designer managing multiple 4K displays, or an executive who appreciates performance wrapped in style, the NUC 15 Pro+ aims to deliver.

With Wi-Fi 7, Thunderbolt 4, support for quad 4K displays, and an aluminium chassis, the NUC 15 Pro+ is clearly engineered for minimalists, creatives, and enterprise users alike. Basically, it's for people who value

space, silence, and speed without compromise.

BUILD QUALITY

ASUS has done a commendable job crafting a unit that feels as solid as it performs. The 0.7-litre chassis is made of aluminium, giving the NUC 15

Pro+ both aesthetic appeal and thermal stability. It weighs just 600 grams, yet the build feels reassuringly dense and durable. Adding to that, it's been MIL-STD 810H certified, so it's tougher than its size would suggest.

Maintenance and upgrades are very user-friendly. A single screw releases a latch, letting you access the internals via a bottom-opening flap. Memory modules are toolless, and even the SSD slots are thoughtfully laid out, one requires a screw, while the other doesn't. This streamlined approach to servicing

makes it a great long-term investment, particularly for IT admins and tinkerers.

Cooling is where ASUS flexes its engineering prowess. Shrouds flanking the fan assembly's direct airflow precisely across cooling fins, managing the 65 W TDP of the Ultra 9 CPU with quiet grace. Vents on either side aid airflow, and in practice, the system remains silent during typical office tasks and audible under sustained loads.

The included VESA mounting bracket means it can hide behind a monitor or blend seamlessly into a home or office setup making it ideal for digital signage, kiosks, or clean desk setups.

FEATURES

The NUC 15 Pro+ is a multi-role workhorse, packed with thoughtful features for a wide range of users. AI-ready compute is the headline feature. With up to 99 TOPS, the integrated NPU (Neural Processing Unit) enables you to run local LLMs like LLAMA 2, Mistral 7B, or even Phi 3.5 with respectable speeds. For developers, data scientists, or researchers working in sensitive environments, this means fast inference without relying on cloud compute.

You also get enterprise-ready vPro technologies, quad 4K display support (2x HDMI 2.1 + 2x Thunderbolt 4 with DisplayPort 2.1), and a CEC Power Sync feature that can shut down all connected displays simultaneously which is perfect for media centre builds.

Other nice-to-haves include 3 months of Adobe Creative Cloud, and expandability for storage and memory. This machine will keep up with not just your current needs but scale well into more demanding workflows.

PERFORMANCE

Despite its diminutive form factor, the ASUS NUC 15 Pro+ delivers commendable performance across both general and specialist workloads, powered by the Intel Core Ultra 9 285H processor. This chip, featuring six performance cores, eight efficient cores, and two low-power cores for a total of sixteen
