

Portrait mode also does a fairly good job for this segment. Edge detection is clean in most shots, and the background blur feels subtle. Skin tones, though, do not look very natural, and finer elements like hair or fingers can sometimes blur into the background.

The 5-megapixel selfie shooter, I think, works average. The selfies are neither pleasing nor are they too bad. I would say, making use of its front camera for meetings and video calls seems like a more practical choice rather than relying on it for nice selfies.

One major gripe though – the shutter lag. After tapping the shutter button, I often had to keep the phone still for 2–3 seconds, or it would capture something completely different, like the sky, ground, or a blurry mess. Not ideal if you're clicking moments quickly.

BATTERY

Here's where the iQOO Z10 Lite 5G

shines. It packs a massive 6000mAh battery, and during testing, it easily lasted me over a day and a half with moderate to heavy use. That's with casual gaming, camera testing, video streaming, and of course, a shameful amount of reels.

But then, the reality hits when you plug it in. The phone only supports

15-watt charging, and a full charge from 0 to 100% took me around 2.5 hours. That's very slow. If you forget to plug it in before bed, you're in for a really long wait the next morning.

VERDICT

The iQOO Z10 Lite 5G is not trying to be a fake midrange or flagship phone. It knows what it is, and within those limits, it delivers where you need it to. It performs well, it lasts long, it looks decent, and it doesn't overpromise.

Sure, I wish it charged faster. I wish the selfie camera were a bit better. I wish the shutter speed was not so slow. But at ₹9,999, how much can I ask for? So if you're looking for a budget phone that does not give you waves of frustrations after a few months, this one can be really worth your time.
