

VIVO X200 FE VS ONEPLUS 13S

WHO'S THE COMPACT PHONE KING, LET'S FIND OUT...

Siddharth Chauhan | editor@digit.in

There was a time not too long ago when you could pick up a flagship Android phone without it feeling like a dinner tray. Then the foldables came. And the “Pro Max” trend exploded. Now, a phone under 6.5 inches feels quaint. Refreshing, even.

That's where the Vivo X200 FE and the OnePlus 13s come in. Both priced at Rs 54,999, both boasting flagship specs, and both designed to fit a normal human hand again. But while they look evenly matched on paper, they diverge in some subtle and some not-so-subtle ways. I've used both extensively,

pocketed them, shot with them, gamed on them, and yes, even dropped one of them. So, which of these compact phones deserves your attention?

Design and durability

Switching to a compact phone isn't just about size, it's about how it feels. And both of these phones understand that. The Vivo X200 FE edges out slightly here with a thinner profile (7.89mm vs OnePlus' 8.05mm) and a surprisingly balanced weight, even though it's technically heavier by a gram (185 grams vs Vivo's 186 grams). Flat sides, aluminium rails, and a grippy matte back make it

feel planted in the hand, no case needed. The OnePlus 13s fights back with its signature symmetrical curves and a velvet-frosted back that's undeniably premium. It feels more polished, but also slightly more slippery. And if you're prone to dropping your phone, the Vivo gives you IP68/69 certification, which means proper water and dust resistance. OnePlus settles for IP65, which is fine for rain, but don't take it to the beach.

Verdict: *Vivo for the adventurer, OnePlus for the clean desk aesthetic.*

Display: Bright and cinematic

Both phones bring 6.3-inch LTPO
