

We've seen local LLMs being incorporated by multiple brands.

A Sudhir Goel – At Acer, we are redefining intelligent productivity with Snapdragon-powered laptops built to anticipate user needs and adapt in real-time. AI-driven features like real-time noise suppression, smart auto-framing, background blur, and lighting correction elevate virtual collaboration with a professional touch.

By offloading the AI tasks to the Neural Processing Unit (NPU), these devices boost system efficiency, conserve battery life, and maintain responsiveness. With large LLMs running directly on-device, users enjoy fast and secure generative AI capabilities without needing internet access. This seamless integration of performance, privacy, and intelligence marks a new standard in PC productivity.

A Saurabh Arora – The new generation of Copilot+ PCs powered by Snapdragon X Series processors are fundamentally changing how we interact with our PCs. Whether you're an enterprise user or consumer, you can push the boundaries of what's possible across productivity, creativity and entertainment with entirely new on-device AI accelerated capabilities.

Not only has Snapdragon X Series been built to enable these experiences, but it's been optimized for these new workloads with all the benefits of running AI directly on the device, including increased responsiveness, more personalization, greater reliability and enhanced privacy.

■ **Faster, More Responsive Experiences:** Thanks to on-device AI, tasks like summarizing documents, drafting emails, or organizing calendars happen in real time without needing to connect to the cloud.

■ **Smarter Multitasking:** AI can now anticipate your needs like suggesting the right app or file at the right time, making your workflow smoother and more efficient.

■ **Always-On Productivity:** The Snapdragon X Series processors are built for all day battery life, so that you can rely on your laptop to keep up with your pace whether you are in meetings, traveling, or working remotely.

With workloads like Agentic AI and LLMs requiring significantly more compute and memory, our Snapdragon X Series processors are built to handle these efficiently, empowering a broad range of devices to support breakthrough capabilities like real-time generative AI, intelligent assistance, and more.

Saurabh Arora
Head of Mobile, Compute
& XR Business, Qualcomm

Q **How does having AI-driven computing in your devices help with improved security and data protection for the laptop users?**

A Sudhir Goel – AI-driven computing in our Snapdragon-powered laptops is redefining security, making it more intelligent, responsive, and privacy-focused than ever before. At Acer, we see AI as a performance enhancer and a critical layer in safeguarding the user experience. By handling sensitive processes locally through the NPU, our

devices reduce reliance on the cloud, significantly lowering the risk of data exposure and improving response times in detecting abnormalities.

This localized intelligence also enables features like real-time threat detection, behavior-based anomaly tracking, and faster biometric authentication—all happening seamlessly in the background. It's about giving users peace of mind without interrupting their workflow. In a time when privacy and security expectations are higher than ever, we are proud that our AI capabilities deliver a proactive, deeply integrated protection layer that elevates confidence and convenience.

A Saurabh Arora – Security is foundational to the Snapdragon computing experience. By leveraging on-device AI, we're able to process tasks like authentication and threat detection locally, keeping personal data private and reducing reliance on the cloud. With built-in hardware-level security and a dedicated NPU, Snapdragon-powered laptops can intelligently detect malware, block phishing, and adapt to user behavior in real time, all without compromising performance or battery life. It's a smarter, more secure approach to computing that puts users in control of their data

Q **Could you provide some examples of unique user-experience innovations that are enabled by Qualcomm's AI capabilities integrated into Acer laptops?**

A Sudhir Goel – Qualcomm's advanced AI capabilities have allowed Acer to deliver a more intuitive and seamless user experience on our latest laptops. Features like real-time noise suppression, auto framing, and intelligent image enhancement make virtual meetings feel more human and less fatiguing, heavily elevating our day-to-day collaboration. **d**
