

SAMSUNG'S TRI-FOLD PHONE Coming later in 2025?

Read what **Minseok Kang**,
VP and Head of Smartphone
Product Planning at Samsung
exclusively told **Digit**

Manas Tiwari | editor@digit.in

Samsung is working on its tri-fold phone and is not far from launching it. While the phone has been rumoured for a while, Samsung head of smartphone planning has now confirmed that it is already in development stage. The Korean tech giant is possibly trying to make the phone commercially available by the end of this year, Minseok Kang, VP and Head of Smartphone Product Planning at Samsung told Times Now Tech and Digit on the sidelines of the Galaxy Unpacked event in New Year.

Samsung used the event to launch its next generation foldable phones – Galaxy Z Fold 7 and Galaxy Z Flip 7 – but the rumoured tri-fold or Galaxy G Fold was missing from the keynote.

“Tri-folding is a new endeavor. It’s complex. Yes,” Kang said in response to our question, after the Unpacked event. “In terms of tri-folding, the device is under development. As I mentioned before, when we launch a new device or new form factor, important considerations include com-

pleteness in the form factor itself and ensuring user satisfaction along with readiness for mass production.”

“We are evaluating key points for the final decision to commercialise the device. I can say that our current target is to launch this device by the end of this year,” he added.

This is the first time when Samsung has officially spoken about the device. It could be the next big innovation in the foldable smartphones realm – a category that hasn’t seen a lot of innovation since inception. This would also make Samsung only the second smartphone maker to bring a tri-fold phone to the market. The only other company that sells a tri-fold phone in the market is Huawei.

As of now, this is the only information available on the upcoming tri-fold from Samsung. It is possible that they holds a separate launch event for it later in the year, but the phone could make an appearance with the Galaxy S26 series at the Unpacked event in January 2026.

Meanwhile, Samsung’s new foldable phones have already opened to record sales in India with the company selling over 2 lakh units in the first 48 hours.

“What you are about to see with the Galaxy Z Fold 7 and Z Flip 7 isn’t just an upgrade. It’s a breakthrough in engineering designed to deliver effective operability, usability, and immersive experiences,” Kang said about the new foldable devices. “Our efforts on foldable devices are not about chasing trends or marketing. It’s a mission to enhance real-world usability. This is not just about being clean and right; it’s about making it right.”

The Galaxy Fold 7 measures 8.9 mm when it is folded and 4.2 mm when unfolded. It is nearly half the thickness of the original Fold. This also makes the Galaxy Z Fold 7 one of the thinnest foldable phones. **D**
