With these 15+ tips and tricks of MacOS

Yetnesh Dubey | editor@digit.in

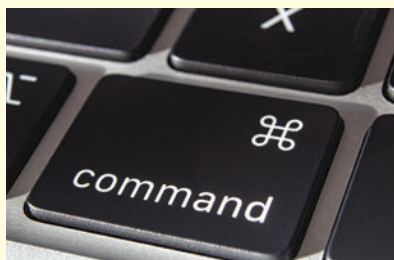

macOS is packed with features, but they often fly under the radar, especially for casual users. In this guide, we're sharing over 20 underrated Mac tips and tricks that will not only make your daily workflow smoother, but also add a little fun to your Mac experience.

Whether you're new to macOS or a seasoned user, there's always something to discover. From hidden gestures and shortcuts to Terminal commands and productivity boosters, these tips will help unlock the full potential of your MacBook, without needing to install anything fancy or dig through complicated settings.

1. Right-click faster with two fingers

Instead of using Control + Click, just "tap with two fingers" on your trackpad to open the right-click menu. It's faster, requires only one hand, and becomes second nature after a few uses.

2. Hide or minimise windows like a pro

- **Command + Option + H** hides all windows except the one being used
 - **Command + M** minimises the window currently open
 - **Command + Option + Click** on any visible part of the desktop to minimise everything instantly
- This trio keeps your workspace clean and distraction-free.

3. Make your Mac talk

Open "Terminal," then type "Say" followed by what you want your Mac to say. Your Mac will literally speak the sentence aloud. Try it with anything.

4. Smarter screenshots without clutter

- **Command + Shift + 3** takes a full-screen screenshot
- **Command + Shift + 4** lets you capture a selected area
- **Command + Control + Shift + 4** copies the screenshot directly to your clipboard so you can paste it without cluttering your desktop

5. Check how long your Mac has been on

In Terminal, type:

uptime

You'll see how many hours or days your Mac's been running continuously.

6. Create a Matrix style animation

First, install Homebrew with this command in Terminal:

```
/bin/bash -c "$(curl -fsSL https://raw.githubusercontent.com/Homebrew/install/HEAD/install.sh)"
```

Then run:

```
echo 'eval "$(curl -fsSL https://raw.githubusercontent.com/kevinreidy/matrix-terminal-theme/master/matrix-terminal-theme.sh)"'
```
