

```
brew/bin/brew shellenv)"' >>
~/.zprofile
eval "$(~/opt/homebrew/bin/
brew shellenv)"
```

Then run:

```
brew install cmatrix
```

Then run:

```
cmatrix
```

Enjoy the Matrix simulation right in your Terminal window.

7. Play Tetris in terminal

```
brew install samtay/tui/
tetris
```

Then run:

```
tetris
```

Now you can play Tetris right inside Terminal. No joke.

8. Properly delete applications

Instead of relying on Launchpad (which only lets you delete some apps), open "Finder > Applications," drag the app to the "Trash," and then right-click Trash and select "Empty Trash."

9. View all open Windows at once

Press **Control + Up Arrow** to activate Mission Control and instantly see every open window on your desktops.

10. Force quit misbehaving apps

Hit **Command + Option + Escape** to bring up the Force Quit Applications window. Select the app that's frozen and force it to close.

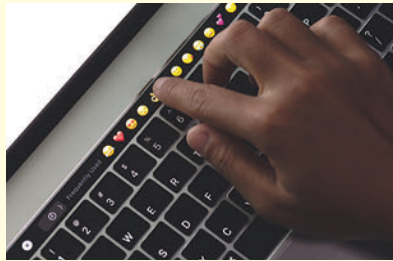

11. Use screenshot toolbar for screen recording

Press **Command + Shift + 5** to

see the screen capture and recording toolbar. Choose between full screen, selected area, or screen recording.

12. Access emoji and special symbols instantly

Tap the **Function (fn)** key to bring up the emoji and symbol panel. Type "rupee", "euro", "degree", or any symbol you need. (Note: This would not work in Google Docs.)

13. Navigate Safari tabs with no mouse

■ **Control + Tab** lets you cycle through tabs

■ **Command + 1 to 9** jumps to a specific tab by order

Perfect for power users who usually keep lots of tabs open.

14. Activate Safari reader mode

Click the "Reader icon" in Safari's address bar to remove clutter from web pages. Or long-press the button. Great for focused reading.

15. Fine-tune your volume controls

Instead of jumping one block at a time, press **Option + Shift + Volume Up or Down** to make small but very precise volume changes.

16. Use ChatGPT without opening a browser

If you've integrated ChatGPT into your macOS (via a shortcut or overlay), you can type commands like:

"ChatGPT: Take a look at my screen and explain the second paragraph"

And get your AI assistant to help you without leaving the document.

17. Rename files the quick way

Click on a file and press "Return." You'll instantly enter rename mode. Much faster than right-clicking, searching for and selecting Rename.

18. Show full folder path in Finder

In Finder, go to "View > Show Path Bar." This adds a small path bar at the bottom showing what your exact location is in the file system.

19. Unlock the power of the Option key

The Option key reveals extra functionality in many places:

■ **Option + Right-click** on docked apps to force quit

■ **Option + Volume key** opens Sound Preferences

■ **Option + Brightness key** opens Display Preferences

■ **Right-click app in Dock + Option > Hide Others** hides everything except the current app

macOS has so many clever tricks built in — most of us just never notice them. Whether you're managing files, cleaning up your desktop, fine-tuning the audio, or playing with Terminal animations, these tips are all about making your MacBook faster, easier, and more fun to use.

Let us know which one was your favourite, and don't forget to share these tips with another Mac user who is in desperate need of an upgrade in their daily workflow. 📌
