

Sanchar Saathi: Key stats and figures

Sanchar Saathi (<https://sancharsaathi.gov.in/>) is an ambitious initiative by India's Department of Telecommunications, aimed at safeguarding citizens from telecom fraud, reinforcing mobile security, and empowering subscribers to better manage their connections. A key achievement of Sanchar Saathi is the blocking of 3.4 crore (34 million) unauthorized mobile connections, accomplished through advanced AI analytics, citizen reporting, enforcement of individual SIM limits, and direct feedback mechanisms. The platform's CEIR system has enabled the blocking of 3.19 lakh (319,000) lost or stolen mobile handsets, helping recover over 5.35 lakh (535,000) such devices nationwide. Additionally, it has played a critical role in curbing digital fraud: 20,096 bulk SMS senders have been blacklisted, and 16.97 lakh (1,697,000) WhatsApp accounts linked to scams have been disengaged.

Sanchar Saathi's Financial Fraud Risk Indicator tool is a game-changer, enabling financial institutions to swiftly freeze 10.02 lakh (1,002,000) suspect accounts and restrict activity in 3.05 lakh (305,000) others.

Particulars	Latest Figure
Portal launch date	16 May 2023
App launch date	17 January 2025
Lost/stolen phones recovered	5.35 lakh
Mobile connections disconnected	3.4 crore (34 million)
IMEI blocked	3.19 lakh
Bulk SMS senders blacklisted	20,096
WhatsApp profiles disengaged	16.97 lakh
Bank accounts/payment wallets frozen	10.02 lakh

International spoofed calls have been dramatically reduced—by 90%—thanks to automated real-time blocking systems. Features like TAF COP let users review and report mobile connections issued in their name, while facilities such as Chakshu empower citizens to report suspicious calls or messages directly. Device verification modules give users easy access to check handset authenticity before purchase.

an avenue for unscrupulous people to do unscrupulous deeds,” he added.

How India govt's fighting rising online scams

At the heart of the government's strategy is a newly developed Digital Intelligence Platform, a unified system that brings all relevant stakeholders together to counter telecom fraud in real time.

“At the Department of Telecommunications (DoT), we have developed a Digital Intelligence Platform that brings together all key stakeholders involved in curbing the misuse of telecom resources into a single, unified framework. This includes the DoT, the Ministry of Home Affairs, law enforce-

ment agencies, police departments across 32 states, and over 570 public and private sector banks,” he stated.

With this, the government aims to ensure complete transparency and seamless coordination. For instance, if a consumer is found engaging in fraudulent activity at one point, that violation is immediately registered across the entire system, triggering a comprehensive, nationwide block on that individual's access.

Sanchar Saathi: Combating SIM fraud with everyone's strength

Another major part of the initiative is the Sanchar Saathi portal, which enables individuals to report misuse of SIM cards and even recover stolen devices. During the interview, Scindia called the platform a tremendous success as it has become a citizen-led initiative.

“We've blocked close to about 1.36 crore phones where they've exceeded the number of SIM numbers that they
