

PERFORMANCE

In a surprising move, Samsung has used its in-house Exynos 2500 chip this year, instead of a Snapdragon chip like last year. It comes in two storage variants:

- 12GB RAM + 256GB storage – **₹1,09,999**
- 12GB RAM + 512GB storage – **₹1,21,999**

Now to test its raw power, we ran some benchmarks. On AnTuTu, the Galaxy Z Flip 7 scored over 1.6 million points. If we compare it to the Razr 60 Ultra, the numbers are not really strong. But in Geekbench, Samsung does manage to give Motorola a good fight.

Now, when you're buying a clamshell foldable phone, you don't really buy it for gaming or hardcore performance. You buy it more for the style and flexibility that it provides, right? Maybe Samsung knows this because the Exynos 2500 is not an octa-core processor. It's a 10-core processor, and the most powerful core is clocked at just 3.3GHz.

Now, even if you want to perform hardcore tasks such as intense gaming, the chipset is capable of that. But given its thin form factor, the phone does start heating up for a while. This has also reflected in our 15-minute stress test. As you can see, in just 15 minutes of heavy load, the graph has turned from green to orange. So, competitive gaming or heavy usage is not its forte.

CAMERA

This year, the camera feels left out. Every parameter has seen an upgrade on the Galaxy Z Flip 7, but the camera didn't get any. You get a dual camera set up with the Z Flip 7, a 50-megapixel primary lens and a 12-megapixel ultrawide lens. On the main display, you get a 10-megapixel selfie camera.

Under good lighting conditions, the Z Flip 7 delivers good pictures. The pictures are colourful, on the natural side, and not too overly saturated. They are sharp as well. But they lack that flagship finesse which you would expect while paying over a lakh for a smartphone.

Even in low light conditions, the phone tries to manage the light well;

there isn't too much brightness, and the shots look natural. However, there is a bit of noise in the pictures, and that's when the details take a hit.

Now, since the Z Flip 7 lacks a dedicated telephoto sensor, the zoomed shots don't quite hit the mark. In daylight, you can manage some decent zoomed shots, but the details take a hit. And in low light, the shots look pretty pixelated.

On portrait shots, you get a soft and nice bokeh, the skin tone is on point, the edge detection is also decent, and the details remain completely intact.

The Galaxy Z Flip 7 also levelled up my selfie game by not using its selfie camera. Since you can use the main camera to click selfies too, you get good quality selfies with natural skin tones.

FINAL THOUGHTS

The Samsung Galaxy Z Flip 7 is not a radical reinvention, but I think it is the most refined clamshell foldable

phone so far, and that matters. You get a larger, end-to-end cover display that's genuinely useful (though still a bit restricted), a sleeker and lighter design with no hinge gap, and a stunning main display that's a treat for both content consumption and creation.

—Mustafa Khan

SPECIFICATIONS

Processor: Exynos 2500 | RAM: 12 GB LPDDR5X | ROM: 256/512 GB UFS 4.0 | Display: 6.9" FHD+LTPO AMOLED | Display refresh rate: 120 Hz | Display protection: Gorilla Glass Victus 2 | Cameras (rear): 50 MP + 12 MP | Camera (selfie): 10 MP | Battery capacity: 4,300 mAh | Charging: 25 W (wired), 15 W (wireless), 4.5 W (reverse wireless) | IP rating: IP48
