

has a 32-megapixel selfie camera with 4K recording support.

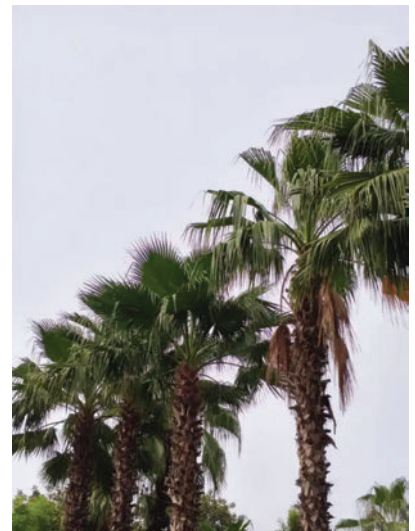

In everyday use, the main camera delivers decent results under good lighting conditions. There's a noticeable tendency towards deeper shadows, which gives images a punchier contrast. This might appeal to those who like a more dramatic look, but if you lean toward natural, balanced visuals, it could feel slightly overprocessed.

The front camera also performs satisfactorily for selfies, rendering skin tones quite naturally, but it lacks a bit of clarity. So, while the camera setup is serviceable for casual photography, it leaves room for improvement, especially if you're someone who prioritises camera quality.

IQOO Z10R: BATTERY

The iQOO Z10R packs a 5,700mAh battery with support for 44W wired charging. In real-world use, the battery performance is impressive, easily lasting up to 1.5 days on a single charge with moderate usage.

In our battery drain tests, the phone showed satisfactory results: 30 minutes of HDR video streaming consumed 6% battery, while an hour of Google Maps navigation, which is typically power-intensive, also drained 6%. A quick 15-minute round of BGMI gaming dropped the battery by around 5%, which is quite efficient. When it comes to charging, the included 44W adapter took about 77 minutes to power up the phone from 0 to 100%.

VERDICT

The iQOO Z10R offers an all-round package for its sub-Rs 20,000 price tag. It combines a bold and eye-catching design with a vibrant and bright AMOLED display that's great for content consumption. Performance is smooth for everyday tasks and casual gaming, backed by good benchmark scores. While it's not a photography

champ, it strikes the right balance for the price.

If you're looking for a stylish 5G phone under Rs 20,000 with a great display, dependable performance and satisfactory battery life, the iQOO Z10R is definitely worth considering.
