Rethinking the big screen

How Lumio's trying to project itself into Indian households

Siddharth Chauhan | editor@digit.in

When Raghu Reddy, CEO and co-founder of Lumio, talks about reaching a million dollars in sales, there's no chest-thumping bravado. "It's a small number," he says. "But for any startup, that first milestone matters. So we are very happy that we've managed to reach that number pretty quickly."

It's been less than two months since Lumio launched its Vision series TVs, and the team is already charting its next act: not a bigger TV,

but a bolder idea. Enter projectors. Lumio's Arc 5 and Arc 7 are plug-and-play Google TV projectors designed for homes, built in India, and aimed at making projection aspirational, accessible and seamless. It's not the obvious next move. But then again, Raghu and co-founder Kailash S are not building an obvious company.

TVs to projector pioneers

Lumio's story started with a gap. "We noticed something post-OnePlus TV's

exit. Nobody was going after the mid-premium customer with intent," Raghu recalls. "Most brands were just under-cutting on price, chasing spec sheets. We asked, what would it take to build a brand people aspire to own?"

The bet paid off. Lumio's Vision 9, a Mini LED smart TV priced around Rs 60,000, became the best-selling Mini LED on Amazon in May.

According to Raghu, it was about the product but understanding the audience: "70% of our customers are Amazon Prime members and 40% of our website visitors are iOS customers." To him, that signals they've found resonance with the kind of consumer that cares about quality, convenience, and aspiration.

A market that looks a lot like 2018

"Projectors today are where smart TVs were in 2018," says Kailash. "There are a lot of cheap offerings under 10K, 15K sort of price points. But there are a lot of issues with respect to reliability and just low trust." Kailash adds, "When
