

best in class but quite sufficient for a productivity-focused device.

In Geekbench 6, the laptop scored 2,129 in single-core and 10,495 in multi-core, that puts it ahead of the likes of Honor Magicbook X14, Acer Aspire 5, and Dell Latitude 7350 Ultralight.

In Cinebench R23, the laptop scored 965 points in single-thread and 6,865 points in multi-thread test. These numbers aren't groundbreaking but do show decent sustained CPU muscle for day-to-day multitasking.

We also ran PCMark 10 Applications test on the device which shows how it will fare in real-world office use. And when it comes to day-to-day productivity, the PCMark 10 Applications test painted a reassuring picture.

The laptop fetched an overall score of 11,120, which is comfortably high. Breaking it down further, Word came in at 5,484, showing reliable performance for writing and editing. Excel impressed with a massive 18,107, reflecting how smoothly the system handles large spreadsheets and heavy calculations. PowerPoint scored 11,274, which means presentations with embedded media or transitions run without a hitch.

Edge got 13,659, pointing to fast and fluid web browsing, streaming, and online collaboration. In daily use, that translates into snappy multitasking across documents, presentations, and open tabs, making it good for students, office users, and hybrid workers alike.

Speaking of graphics, the integrated Adreno GPU did a decent job in GFXBench. The laptop managed 4,322 frames in Aztec Ruins High (DX11) and 6,800 frames in Aztec Ruins Normal.

This is higher than some laptops in the same, or even higher price range. For instance, Vivobook 16, Acer Swift 14 AI, and Honor Magicbook X14.

Memory performance was also impressive, with AIDA64 showing 118 GB/s read speeds (again higher than Acer Swift 14 AI, and Honor Magicbook X14), 46 GB/s write, and 60 GB/s copy, along with a low 7.5 ns latency. That snappiness translates to smooth multitasking and quick app switching.

SSD performance is another highlight. In CrystalDiskMark, the 512GB PCIe Gen 4 SSD posted 6,327 MB/s sequential read and 4,316 MB/s sequential write speeds, with great random read/write as well. This means that transferring large media files, installing applications, or booting Windows on this laptop is quite seamless.

In addition to this, PCMark's Full System Drive test, with a score of 1229, showed that this SSD keeps the system responsive under real-world loads.

Talking about AI features, the laptop comes with a dedicated NPU which is rated for 45 TOPS on paper, but what matters is how it actually feels in use. The Copilot key instantly brings up the assistant without lag, and the app itself is snappy and responsive when pulling up answers or helping with tasks.

The laptop also comes with ASUS AI camera with Studio Effects. The camera comes with a physical shutter, which is important to protect your privacy.

I tried the Studio Effects during a couple of calls, and they do make a difference. However, the video calls turned out just fine without them too. I tried switching on the background blur, auto-framing and eye contact correction before starting a meeting. While these features worked just fine, I personally don't find them necessary. Playing around with different filters was also fun, though they lean more towards the cartoonish side and aren't really suited for official video calls.

VERDICT

At a special launch price of Rs 65,990, the Asus Vivobook S16 OLED with a Snapdragon X processor makes a strong case for itself as an everyday workhorse. For professionals, it's a sleek and reliable laptop with a great battery life that is capable of handling day to day tasks with ease. Students will also find plenty to love here, thanks to its lightweight design, refreshing colour options, and dependable battery life.

This isn't built for gaming or entertainment. The 60Hz refresh rate and integrated GPU limit its suitability for gamers or video editors. For others, the Vivobook S16 is a worthy investment.
