

Oppo F31 Pro+

More about reliability than raw power

The mid-range smartphone segment in India is more competitive than ever, with brands racing to offer the best combination of performance, camera capabilities, and flashy features. Oppo's F31 Pro+ takes a slightly different route. Priced from Rs 32,999, it focuses less on chasing benchmark supremacy and more on delivering reliability and durability for daily use.

After around two weeks of daily use and testing, I'm here to break down the Oppo F31 Pro+'s design, display, performance, cameras, and battery to see how well it handles real-life demands and whether it's worth your attention.

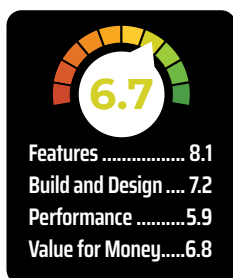

DESIGN AND BUILD

First, let's talk about the design. The Oppo F31 Pro+ 5G comes in three colour options, and I got the Gemstone Blue variant. The top half has a deep blue finish, while the bottom half shifts colour depending on how light hits it, revealing hints of bluish-purple. The effect isn't just on the back panel; even the circular camera module catches the light and creates a subtle glowing ring around its edges.

While the back panel has a matte finish, it attracts fingerprints. So, unless you use the bundled black case (which sadly hides the beautiful finish), you'll spend a lot of time wiping it down. The phone also feels a bit wider, likely because of its boxy design, which makes one-handed use less convenient.

When it comes to durability, Oppo has gone all out. The F31 Pro+ features a Multi-Layer Airbag Cushioning system, which Oppo claims protects key components like the camera, speakers, battery, and vibration motor. It's MIL-STD-810H-2022 certified, meaning it has been tested to withstand extreme

₹32,999

temperatures, humidity, rain, dust, vibration, and even salt mist. Add to that the IP66, IP68, and IP69 ratings, and this phone is protected against dust, high temperatures, and some strong water jets.

Oppo also claims it can survive contact with 18 different types of liquids, including coffee, milk, fruit juice and beer. I tested this claim by submerging the phone in a pool and even burying it in Jaisalmer's sand dunes, and I must say, it survived everything without a scratch. In short, the Oppo F31 Pro+ 5G is not

just good-looking but also very tough. It can handle water, dust, and accidental drops without any trouble.

DISPLAY

Let's talk about the display now. The Oppo F31 Pro+ comes with a 6.8-inch AMOLED panel offering FHD+ resolution, a 120Hz refresh rate, and a claimed peak brightness of up to 1,600 nits. The screen also comes with AGC DT-Star D+ protection. In everyday use, the screen looks sharp and vibrant, making it perfect for binge-watching, scrolling through reels, or even casual gaming.

I tested the display using Calman and the SpectraCal C6 Colourimeter, and it recorded an average Delta E of 2.2, which means the colours look good and vibrant when watching content online. Also, the phone is well-equipped to display a wide range of colours, with gamut coverage of 99.2% in the sRGB colour space. During a lux meter test, it reached a peak brightness of 1,630 nits, which is slightly brighter than Oppo's claims, so you can be assured that you won't need to shade the screen when outdoors.

PERFORMANCE

This is where the Oppo F31 Pro+ shows a bit of weakness. It runs on the Qualcomm Snapdragon 7 Gen 3 chipset, which seems powerful on paper but doesn't quite match up to some of its competitors in this price range. On AnTuTu, it scored 8,90,102, while phones like the OnePlus Nord 5 (Snapdragon 8s Gen 3 chipset) and Realme 15 Pro (Snapdragon 7 Gen 4 chipset) crossed the one-million mark. In Geek-
