

bench, it achieved 742 in the single-core test and 2,464 in the multi-core test, which are again behind the competition.

That said, real-world performance is smooth. The F31 Pro+ handles daily tasks like app switching, video calls, messaging, and browsing with ease and without any noticeable lag.

When it comes to gaming, BGMI runs well, maintaining solid frame stability at up to 60 FPS. However, at this price point, support for 90 FPS would have made the experience even better.

So, while it may not be the fastest phone in the Rs 30K- Rs 35K range, it's certainly among the most consistent. If you're a casual or moderate gamer, you'll likely value its stable and reliable performance over raw benchmark numbers.

CAMERA

Now, let's come to the cameras. The Oppo F31 Pro+ comes with a dual rear camera setup, featuring a 50-megapixel primary sensor with OIS support and a 2MP monochrome lens. On the front, there's a 32MP punch-hole camera for selfies and video calls. The camera system offers a variety of modes such as underwater photography, time-lapse videos, slow-motion, and 4K video recording at 30fps.

In bright daylight, the 50MP main camera delivers sharp, detailed photos with vibrant colours. The images strike a nice balance between highlights and shadows, resulting in well-exposed shots that look natural.

Low-light performance is, in all honesty, fairly average. In low-lit environments, photos come out clear with decent detail. But in very dim settings, the F31 Pro+ starts to show its limitations, with images not only losing sharpness but also start struggling to maintain clarity.

BATTERY

The Oppo F31 Pro+ 5G really shines when it comes to battery performance. Its massive 7,000 mAh battery promises long hours of usage and is perfect for anyone who hates charging their phone every day. That said, in the PCMark test, it lasted 15 hours and 27 minutes, which is a little underwhelming for such a big battery. This could be due to poor optimisation, something Oppo could improve with an update.

What impressed me was the real-world performance. With casual use (like messaging, browsing, checking emails, and streaming a few videos), the phone easily lasted more than a day and a half, and sometimes close to two full days on a single charge.

The bundled 80W charger topped the phone up from 0 to 100% in just 1 hour and 21 minutes, which is quite fast for a battery this large. The phone also performed well in specific tests, dropping only 5% after 30 minutes of video streaming and just 4% after an hour of Google Maps navigation.

Oppo has even included reverse charging, so you can power up other

devices. Overall, even though the benchmark scores weren't the highest, the Oppo F31 Pro+ delivers dependable battery life that won't let you down.

VERDICT

The Oppo F31 Pro+ 5G is designed for users who want a phone that combines style, durability, and long battery life. Its dual-tone design looks striking, and it can easily handle everyday bumps, spills, and accidental drops. The massive 7,000 mAh battery lasts close to two days. The AMOLED display is bright, vibrant, and perfect for streaming or daily use.

It's not the fastest performer in its price range, and the cameras could do better in low light, but if your priority is durability, long battery life, and a great viewing experience, the Oppo F31 Pro+ is worth considering.
