Luminous on mixing energy with entertainment

With the Edge Go 1500, it's embracing a new product category

Yashraj Verma | editor@digit.in

Luminous Power Technologies, best known for its inverters, batteries and solar solutions, is venturing into a new space with the launch of its Edge Go series. The first product in the line-up, the Luminous Edge Go 1500, is designed as a portable energy solution that also doubles up as a Bluetooth speaker and karaoke machine. The device can be used to charge phones, laptops and accessories. At the same time, it blends utility with entertainment, marking a significant shift in the company's product strategy.

At first glance, the Edge Go 1500 may appear like a high-powered party speaker. But for Luminous, it is positioned as part of the brand's larger energy technology portfolio.

"We are very much true to our purpose of being an Energy Tech company," Preeti Bajaj, Chief Executive Officer & Managing Director of Luminous Power Technologies said. "We have collaborated with other technologies, such as speaker technology, to bring something new that meets consumer needs. We wanted to create something portable, modern, and connected."

She said that the Edge Go is a product that suits today's way of life and gives you control. "And since voice is such a big trend, we felt energy and tech should meet," Bajaj added.

The Edge Go is aimed at consumers looking for flexibility in how they use energy on the move. Bajaj elaborated that every household today has members who identify as adventurers, gamers or explorers. She said that if each of these homes has a Luminous customer, then the next generation can be an Edge Go customer as well.

This reflects the company's effort to extend its relevance from backup power in households to lifestyle-driven, portable energy needs.

For Luminous, this launch is also about repositioning the brand for a new generation of consumers. While its traditional offerings continue to serve households during outages, products like Edge Go are designed to bridge energy reliability with everyday experiences — for travel, home entertainment, or social gatherings.

It's not often that an energy solutions company steps into a product niche associated with leisure. But Luminous appears confident that the synergy between energy tech and entertainment will resonate with younger, tech-savvy buyers.

As a device, the Edge Go 1500 is both functional and versatile. It is capable of powering devices while also hosting a karaoke session. For Luminous, the challenge will be to ensure this innovation does not remain a one-off but instead becomes part of a sustainable new category offering in its product portfolio. **d**
