

full marks. Alienware 18 Area-51 packs a solid audio setup with dual 2W woofers and dual 2W tweeters powered by Realtek amps, and it's tuned with Dolby Atmos for extra depth.

The result is a loud, clear sound with decent bass for a laptop. Be it gunfire in first-person shooter games, eerie background score in horror games, or the sound of engines roaring in car-racing games, the audio doesn't ever disappear. With that being said, the speakers are obviously not a complete replacement for a dedicated headset, but as far as laptop speakers are concerned, this laptop matches the premium vibe.

A FLAGSHIP EXPERIENCE

Here's how some demanding AAA titles fared on the laptop.

Doom: The Dark Ages: At Ultra Nightmare graphics settings in 2K resolution, frame rates hovered between 115-130 fps. Dropping to 1080p high with Nvidia DLSS enabled pushed averages to 450 fps, and medium settings reached 560 fps. Moreover, fast-paced combat never stuttered, making every firefight chaotic yet precise.

Horizon Forbidden West: Exploring the post-apocalyptic world of Horizon Forbidden West was also a visual treat. At 1080p with high graphics settings and AMD Frame Gen turned on, the laptop averaged 250 fps, and medium settings reached 315 fps. At 2K resolution and best graphic settings, I got around 170-200 fps.

The massive open world, from sprawling cities to verdant wilderness, appeared detailed and alive. Fast traversal, combat, and environmental effects all ran smoothly, making the gameplay as immersive as it was exhilarating on the large 18-inch panel.

Forza Horizon 5: High graphics at 1080p delivered 450 fps, climbing to 500 fps on medium. When I changed graphic settings to extreme and resolution to 2K, the laptop still managed 250 fps, and every vehicle in the game looked breathtaking. The world of Forza Horizon 5 came alive, and I enjoyed cruising through the open world. The

18-inch display made driving at top speed breathtaking, with a depth and perspective that felt almost real.

Valorant: For those who enjoy competitive titles and absolutely hate those FPS drops, the laptop is a hit. At 1080p resolution and high graphics settings, the Alienware Area-51 delivered an average of 540 fps in Valorant. On medium graphics settings, the game averaged 700 fps. Even when I bumped the resolution to 2K, frame rates hovered between 400 and 600 fps.

The Witcher 3: Wild Hunt: What's better than exploring the world of The Witcher 3? Exploring it in 2K with Nvidia's 5090 laptop GPU. On the Alienware 18 Area-51, the Witcher 3 averaged 130 fps with Ultra High graphics settings and 2K resolution. When I turned settings down to high graphics at 1080p, the game ran at 230 fps. Rich environments, sharp character models,

and detailed effects kept the game immersive and visually stunning.

WHO SHOULD BUY?

The Alienware 18 Area-51, with Intel Core Ultra 9 processor and Nvidia's 5090 laptop GPU, is a machine built for gamers who are looking for desktop-level performance in a portable form factor. Its stunning display, excellent audio, and best-in-class GPU power make it one of the most immersive portable gaming rigs you can buy right now.
