

■ **MAJOR SOFTWARE & OS UPDATES**

Vivo's new OriginOS 6 replacing Funtouch OS released globally

Vivo has officially unveiled OriginOS 6, its major new operating system that replaces the familiar Funtouch OS across all global markets. Built upon the foundation of Android 16, the new OS showcases a completely revamped aesthetic with the introduction of the elegant Origin Design language, improved performance via the Origin Smooth Engine, and deep AI integration with tools like AI Creation, AI Retouch, and AI Search. The global rollout is scheduled to commence in November 2025, beginning a phased deployment that prioritizes the latest flagship smartphones and high-end devices. The initial wave of updates will specifically target premium Vivo X-series and high-performance iQOO models, with a broader range of mid-range devices set to receive the OS early in the following year. tinyurl.com/ftos6o

Nothing unveils Essential AI for personalised apps

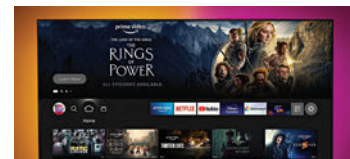

Nothing has unveiled Essential, its new AI platform to create a personal, adaptive OS. Key features include Essential Apps, which users can build through natural language prompts, and Playground, a space to share and remix AI-made tools. tinyurl.com/eaiOn

How the AWS outage differs from past Crowd-strike and BGP failures

On October 20, 2025, AWS suffered a major DNS failure in its US-EAST-1 region, disrupting services like Reddit, Roblox, and Snapchat. AWS's DNS issue occurred within the cloud. <https://tinyurl.com/aws2ou>

Amazon Vega OS launched for new Fire TV

Amazon has launched Vega OS, a brand new Linux-based operating system for its Fire TV lineup, debuting with the Fire TV Stick 4K Select (\$39.99). Unlike Android-based Fire OS, Vega OS drops Google frameworks, giving Amazon full control over updates and features. tinyurl.com/v4osk

■ **SOFTWARE & APPLICATION LAUNCHES**

Adobe Premiere launches free mobile app for iPhone

Adobe Premiere has officially arrived on the iPhone, marking a significant step in professional video production by bringing a full suite of pro-grade editing tools to mobile devices. The application supports high-fidelity 4K HDR editing, allowing

integration of advanced AI capabilities, including 'Enhance Speech' to instantly clean up audio and 'Generative Sound Effects' for context-relevant sound design. Furthermore, the mobile app ensures a seamless, modern workflow through cross-platform syncing,

creators to work with cinematic quality footage directly from their phones with exceptional color depth and clarity. A major highlight is the

enabling editors to effortlessly move projects between the iPhone and their Premiere Pro desktop application. Under the hood, the app is powered by Firefly AI, which not only provides a constantly updating library of high-quality creative assets but also streamlines the creation process. Despite the initial Apple focus, Adobe has confirmed Android support is coming soon. tinyurl.com/ap8river
