

COOLERS

Thermalright Peerless Assassin 120 SE

If you're building a solid mid-range PC and want excellent thermals without burning through your budget, the Peerless Assassin 120 SE is a sweet deal. Its sophisticated dual-tower heatsink design, skillfully paired with two high-quality fans, allows it to punch way above its modest price tag in terms of cooling power. You can confidently and comfortably cool demanding processors like an Intel Core i7 or an AMD Ryzen 7 CPU, making it a perfect thermal solution for gaming or editing rigs that want silent performance. Just make sure you have enough case clearance — this beast isn't small. It's one of those rare coolers that proves you don't need RGB to show off.

Arctic Liquid Freezer III Pro

The Arctic Liquid Freezer III Pro immediately signals that you "mean business" when it comes to thermal management, making it a standout choice for high-performance systems. Whether you're running an Intel Core i9 or an AMD Ryzen 9 and want a perfect blend of exceptional cooling performance

and sleek aesthetics, this AIO (All in One) liquid cooler delivers very consistently. It is built around a beefy, high-efficiency pump, paired with radiator options that are sized to fit a majority of modern PC cases, all while leveraging that signature Arctic cooling efficiency. The added VRM fan is a genuinely clever engineering touch, actively keeping your motherboard's power delivery components cool too. For serious multitaskers, streamers, and gamers who push their rigs to the edge, this one ensures your CPU stays calm even under full load.

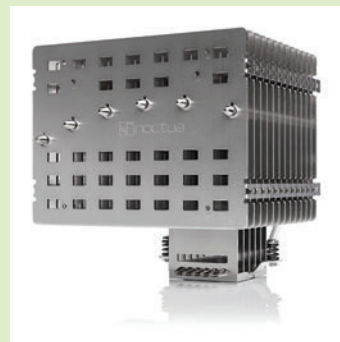

Corsair iCUE H170i Elite LCD XT

If you absolutely love performance and flair, the Corsair iCUE H170i Elite LCD XT is designed to be the undisputed showpiece cooler in your rig. This top-tier, extreme-performance 420mm AIO liquid cooler is specifically engineered for high-end builds that demand best-in-class cooling power alongside stunning style. Its customizable LCD screen lets you display system stats or memes (no judgment), while the RGB fans sync beautifully with Corsair's iCUE software. It's perfect for flagship CPUs, custom builds, or anyone building their dream PC. Sure, it's overkill for an entry-level system, but if you're spending big — this is the crown jewel.

Noctua NH-P1

The Noctua NH-P1 is a specialty cooler designed purely for the segment of users who prize absolute, total silence above all else. This unit is a completely fanless cooler, meaning it is meticulously engineered for those who want absolute peace — liter-

ally. Ideal for low-power, passively cooled systems or home theatre PCs, this cooler relies purely on massive heatsink fins to dissipate heat. It is perfectly ideal for low-power, passively cooled systems or silent Home Theatre PCs (HTPCs). Pair it with a low-TDP CPU, and you've got yourself a whisper-quiet build that still runs cool. The NH-P1 represents peak Noctua engineering — an exciting example of form following function, executed beautifully and silently.

Cooler Master MasterLiquid 240

For first-time builders or anyone aiming for a clean, balanced setup, the Cooler Master MasterLiquid 240 is a reliable pick. It delivers solid thermal performance, straightforward installation, and minimal noise — all at a reasonable price. The dual 120mm fans handle moderate overlocks and high gaming loads without breaking a sweat. It's not flashy, but it's dependable — a great mid-tier AIO cooler that keeps things cool without draining your wallet. Perfect for 1080p or 1440p gaming rigs that want a touch of liquid-cooling finesse.
