

Center Sync, which turns the TV into a functional centre channel. The experience is immersive and the sound feels like it's coming directly from the screen, not below it. Support for Dolby Atmos and DTS:X adds further spatial depth, especially during high-action or orchestral sequences.

GAMING PERFORMANCE

Gamers are well-catered to here. The Bravia 5 offers HDMI 2.1 features such as VRR, ALLM, 4K 120Hz, and eARC, along with Auto HDR Tone Mapping and Auto Genre Picture Mode for PS5 users. The new Game Menu 2 lets you adjust Black Equaliser, Crosshair, and Screen Size mid-session, without leaving your game.

Motion clarity remains excellent with minimal latency and zero tearing. Fast-paced titles like Spider-Man 2 or Ghost of Tsushima feel responsive

and fluid, making this one of the most gaming-capable TVs in Sony's lineup.

DESIGN AND BUILD QUALITY

The Bravia 5 features Sony's "One Slate" design philosophy. The aluminium chassis with diamond-cut edges and a two-way adjustable stand that looks refined and minimal. The bezels are nearly invisible, and whether wall-mounted or on a table, the TV looks elegant and understated. Sony also bundles free installation and choice of wall mount or tabletop stand, which adds to its premium experience.

Despite its slim form, the build quality is excellent, and the TV feels sturdy. Cable management is tidy, and even the 85-inch and 98-inch variants maintain structural integrity without panel flex. The design complements high-end interiors just as well as it fits modern living rooms.

VERDICT

So where does that leave us in terms of what we think about this TV? Well, plain and simply, the Sony Bravia 5 is an all-rounder that brings the best of Sony's TV engineering and blurs the line between flagship and mid-range. You get precise colour reproduction, superb brightness control and intelligent tone mapping wrapped in a sleek design.

I mean this TV's ability to retain details in low-light scenes, suppress blooming, and handle mixed-brightness frames puts it among the most refined TVs in its segment that are currently available in the market for purchase. Motion handling is excellent, colour accuracy is reference-grade, and Sony's intelligent processing ensures that every frame feels deliberate and cinematic. It hardly puts a foot wrong.

If you're after a TV that can do justice to movies, games, and daily streaming alike, the Bravia 5 is the sweet spot for most premium buyers. It's bright enough for Indian homes, tuned for purists, and it's a reminder of why Sony still leads when it comes to making TVs that feel alive.
