

stable, and capable enough to support Google's AI ambitions.

The Pixel 10 runs Android 16 out of the box and continues Google's promise of seven years of OS and security updates, making it one of the longest-supported Android phones available. The UI remains clean, minimal, and free from clutter.

The new Gemini Nano model powers on-device features like Magic Cue, Pixel Screenshots, and Circle to Search, all working offline without noticeable lag. Gemini Live brings conversational assistance and feels faster and more natural than before.

Photo editing tools such as Reimagine, Best Take, and Zoom Enhance now output noticeably quicker, while Call Assist and Live Translate benefit from improved contextual accuracy.

BATTERY AND CHARGING

Battery life sees a notable step up this year. The Pixel 10 packs a slightly larger 4,970 mAh cell, and thanks to the more efficient Tensor G5 chip and Android 16 optimisations, endurance has improved significantly. In the PCMark Battery Test, it clocked 18 hours and 14 minutes, up from the Pixel 9's 14 hours and 45 minutes, which is a solid 23% gain in longevity.

In everyday use, the phone comfortably lasts a full day of mixed usage, including camera, GPS, and streaming, often stretching well into the next morning with moderate use. Heat management under sustained use is also

noticeably better than before. Charging, however, is where the Pixel 10 still feels conservative. The 30 W wired charging takes about 100 minutes to reach full capacity, but is slower than most competitors out there.

CAMERA

The Pixel 10 introduces a triple-lens system featuring a 48 MP main sensor, 13 MP ultra-wide, and a 10.8 MP telephoto lens with 5x optical zoom. While the hardware doesn't appear drastically different from the Pixel 9 on paper, the results tell a story of refinement.

In daylight, the Pixel 10 continues Google's tradition of exceptional computational photography. Colours are strikingly natural yet vibrant when needed.

The blues of the sky are deep without oversaturation, reds and greens pop with accuracy, and exposure remains impressively balanced even in harsh backlighting. Highlights stay in check, and shadow detail is well preserved, producing images that look true-to-life rather than overly processed.

VERDICT

The Google Pixel 10 quietly refines everything the Pixel 9 aimed for and finally makes it feel complete. This is Google's most polished phone yet, and more importantly, the first one that makes its AI layer feel invisible.

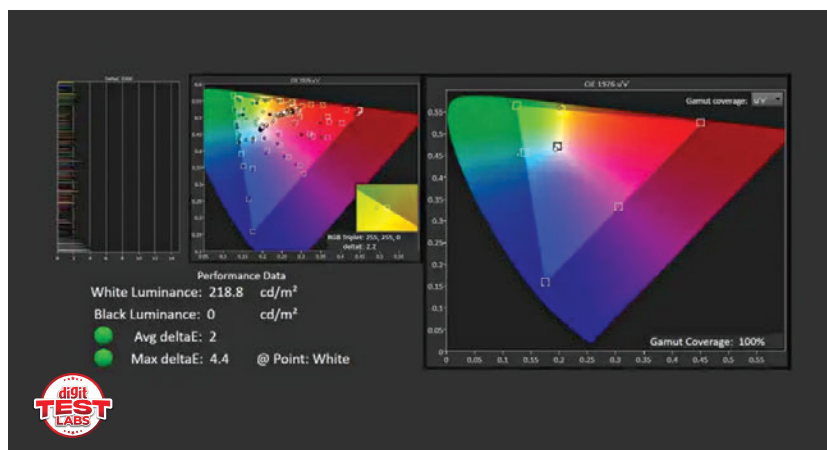

—Siddharth Chauhan

SPECIFICATIONS

Processor: Google Tensor G5 | Security: Titan M2 security coprocessor | RAM: 12 GB | Storage: 256 GB | Display: 6.3-inch OLED Actua display | Refresh Rate: 120 Hz | Cameras (Rear): 48MP Main + 13MP Ultrawide + 10.8MP 5x Telephoto | Camera (Front): 10.5MP Dual PD | Battery: 4970 mAh | Charging: 30W Wired, 15W Pixelsnap wireless | IP Rating: IP68
